

Aspergillus rambellii

8 cohorts has same trend in enticed in CRC
7 cohorts play significant different.

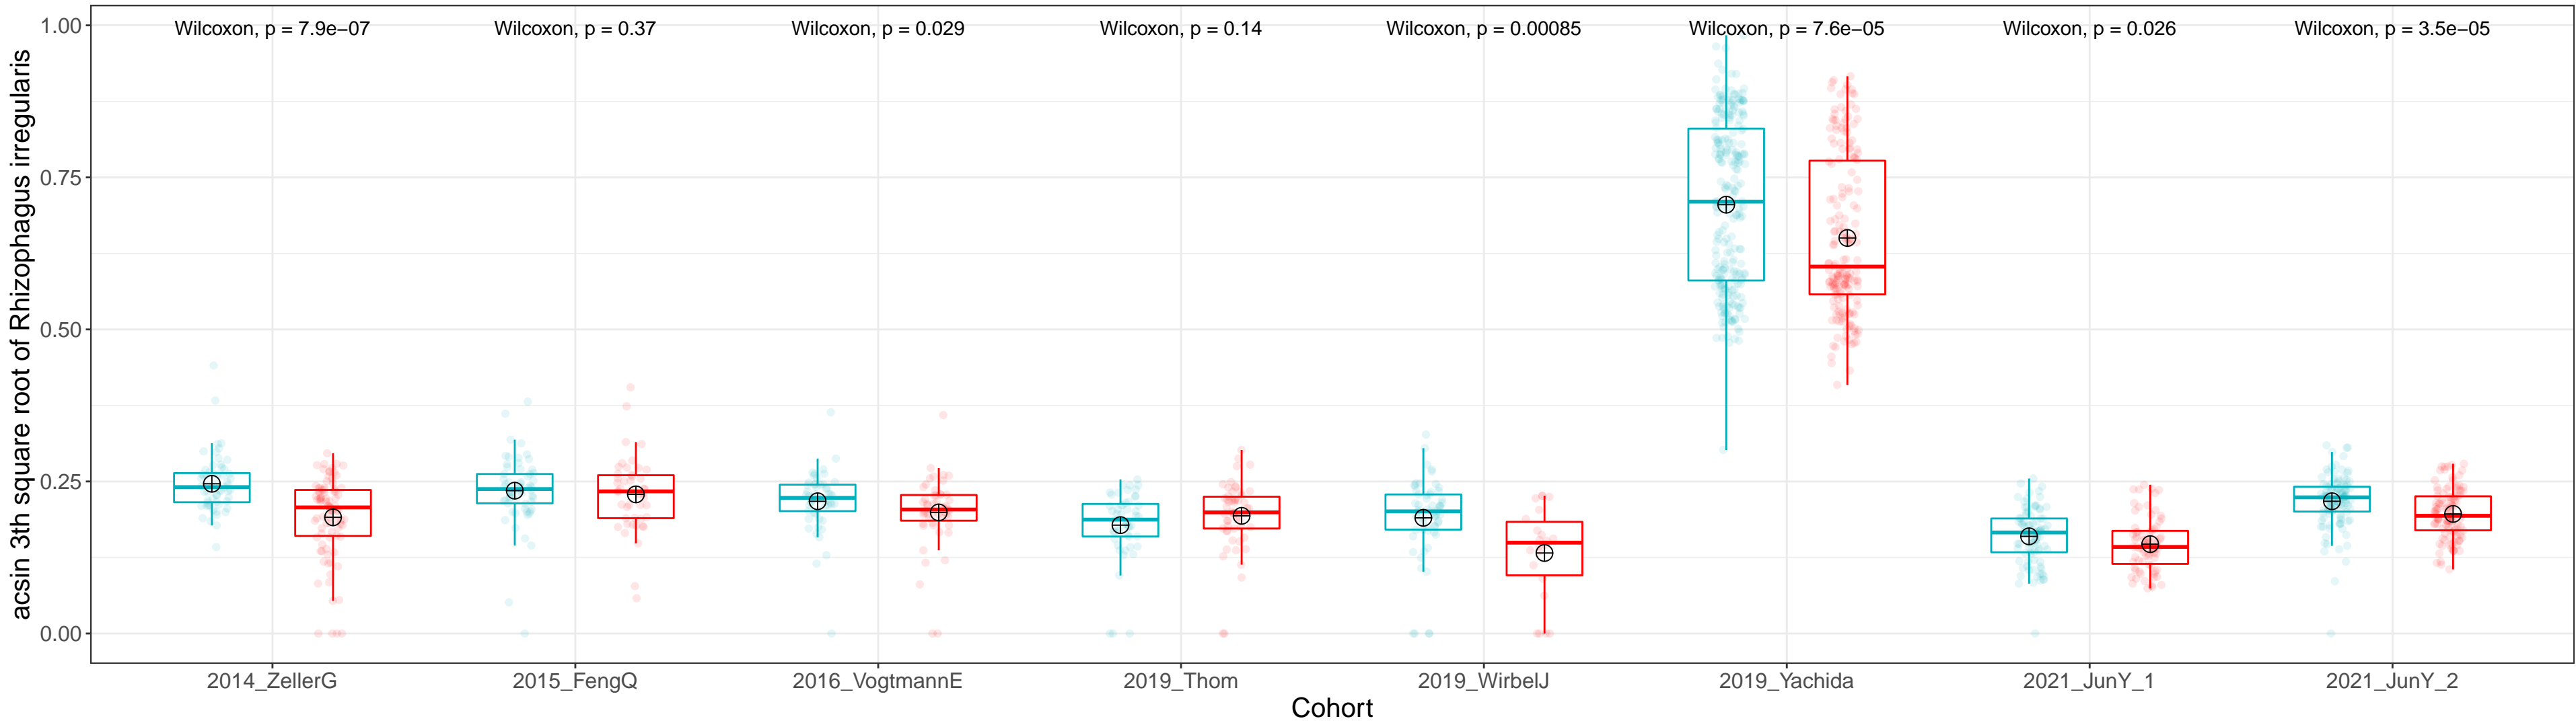

Stage  CTRL  CRC

Rhizophagus irregularis

7 cohorts has same trend in depleted in CRC.
6 cohorts play significant different.

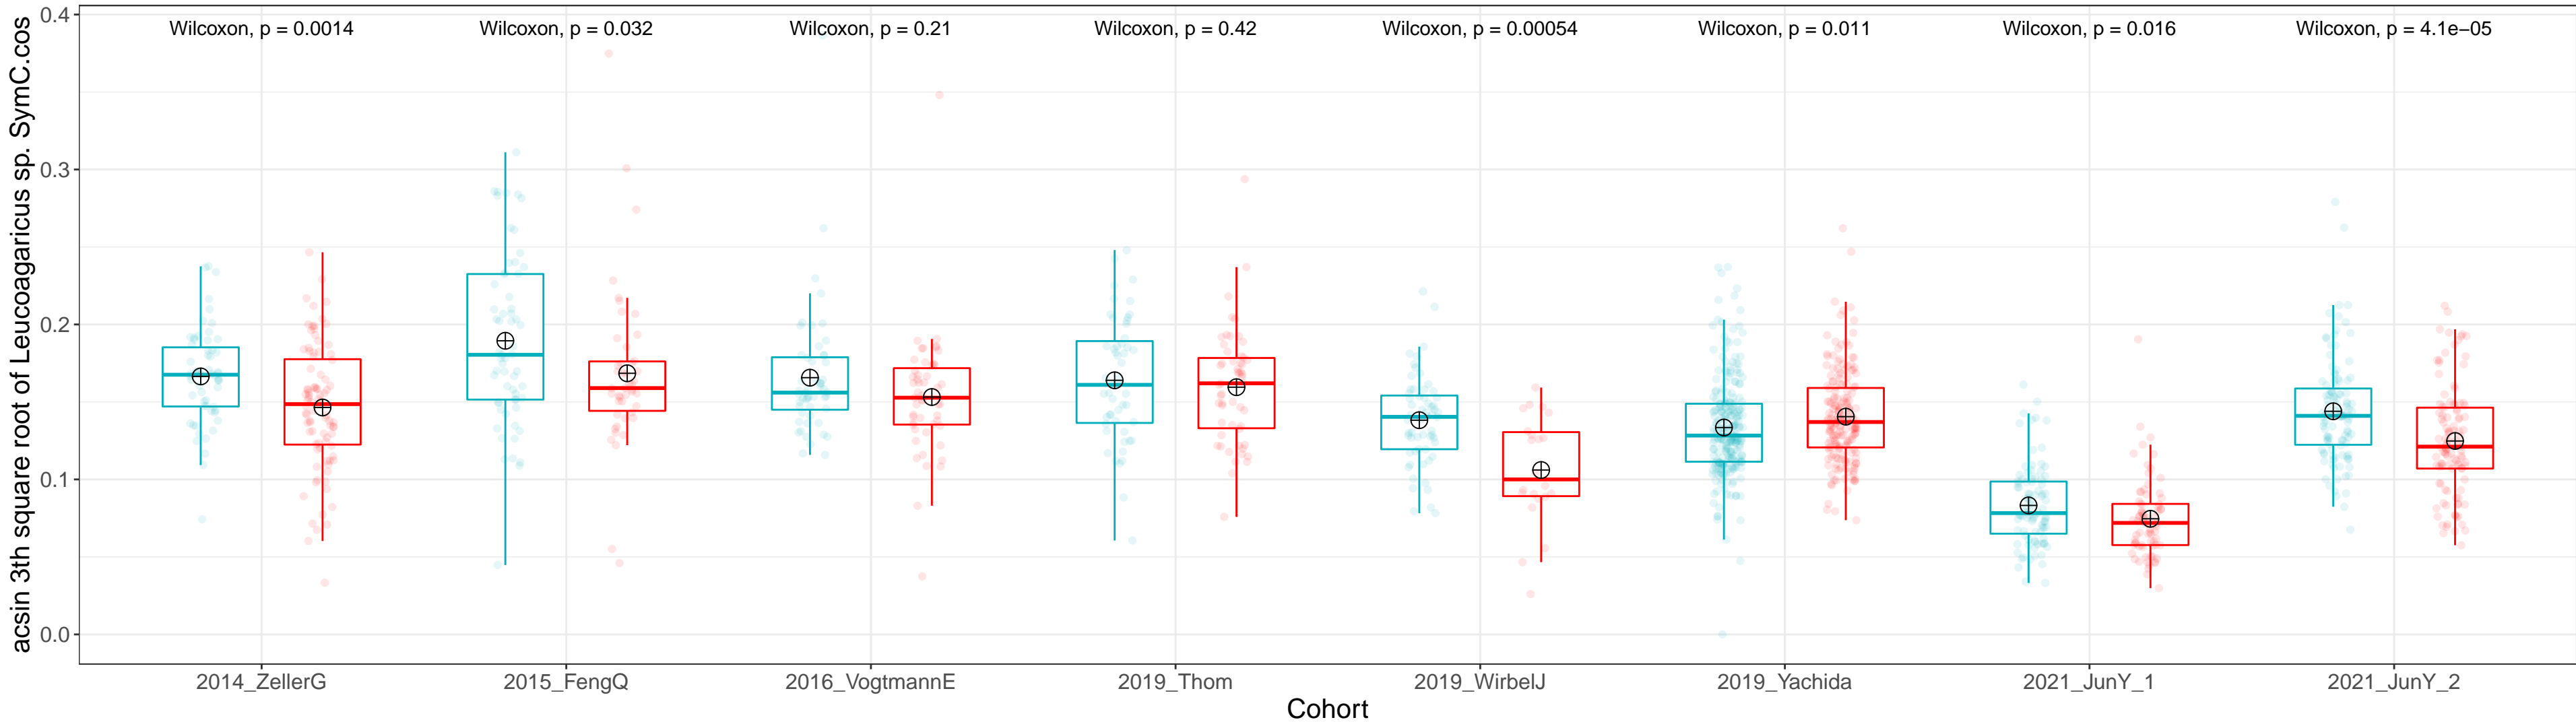

Stage CTRL CRC

Leucoagaricus sp. SymC.cos

7 cohorts has same trend in depleted in CRC.
6 cohorts play significant different.

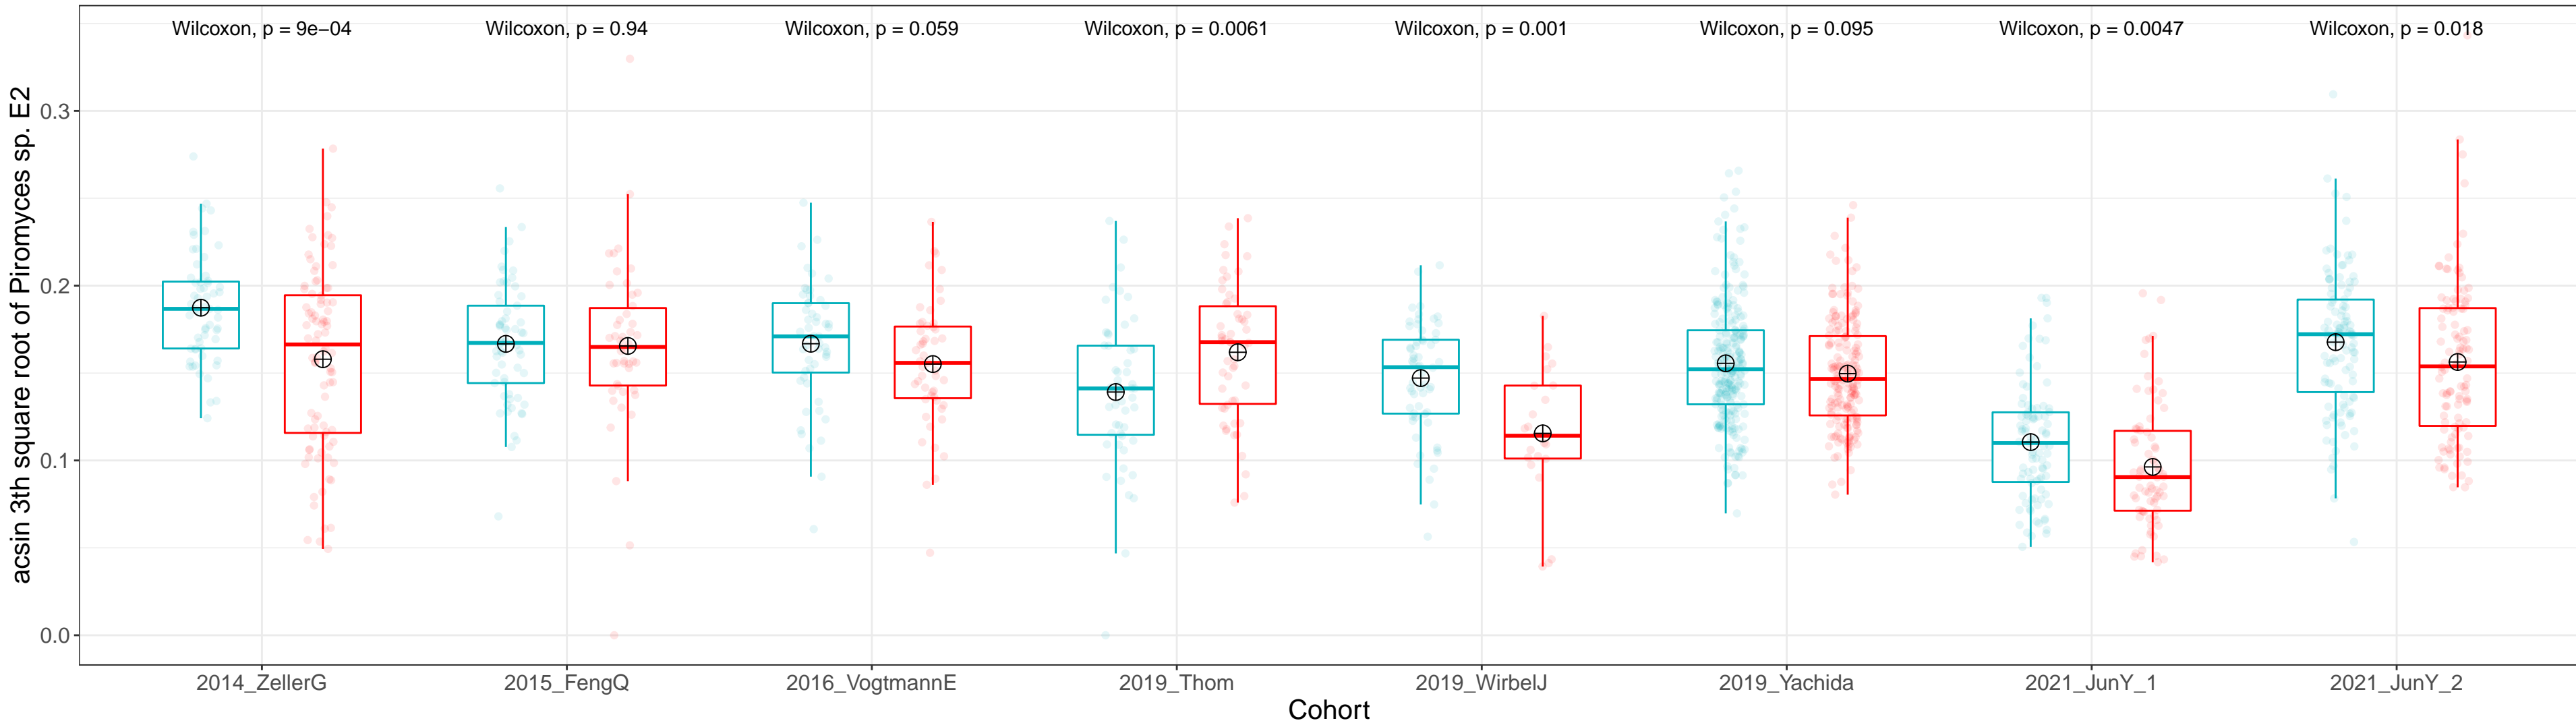

Stage CTRL CRC

Piomyces sp. E2

7 cohorts has same trend in depleted in CRC.
5 cohorts play significant different.

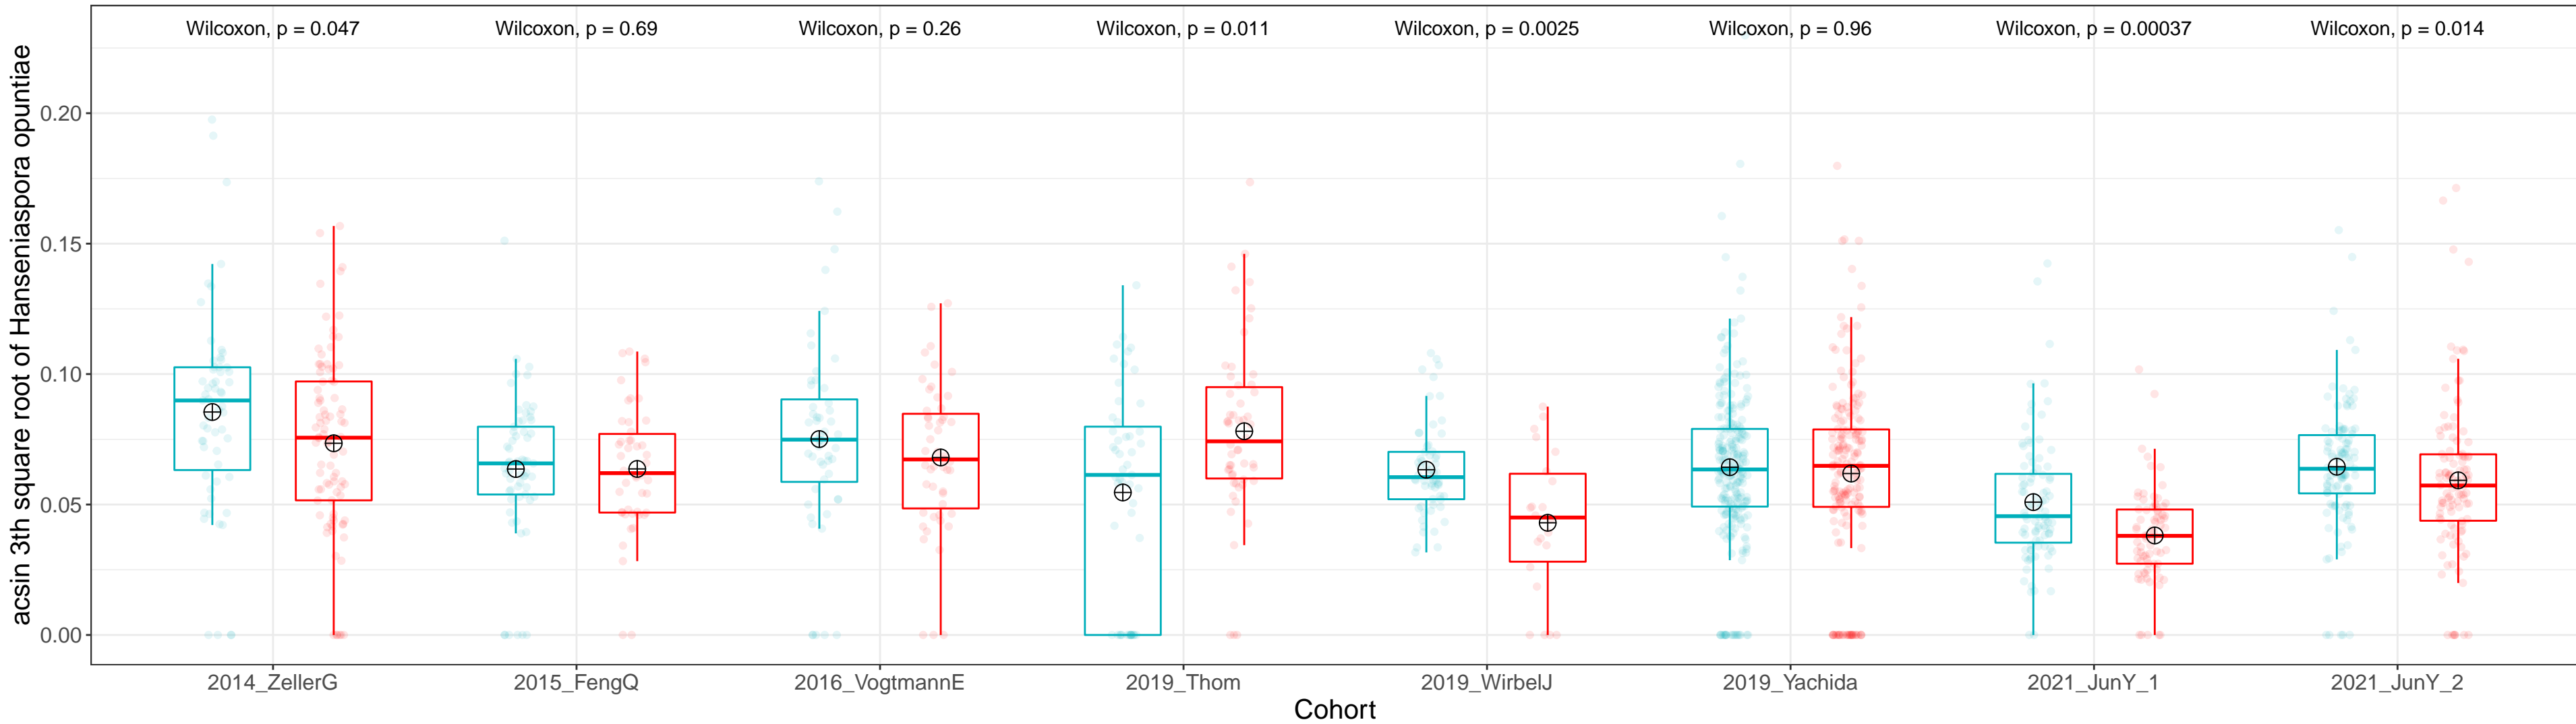

Stage CTRL CRC

Hanseniaspora opuntiae

7 cohorts has same trend in depleted in CRC.
5 cohorts play significant different.

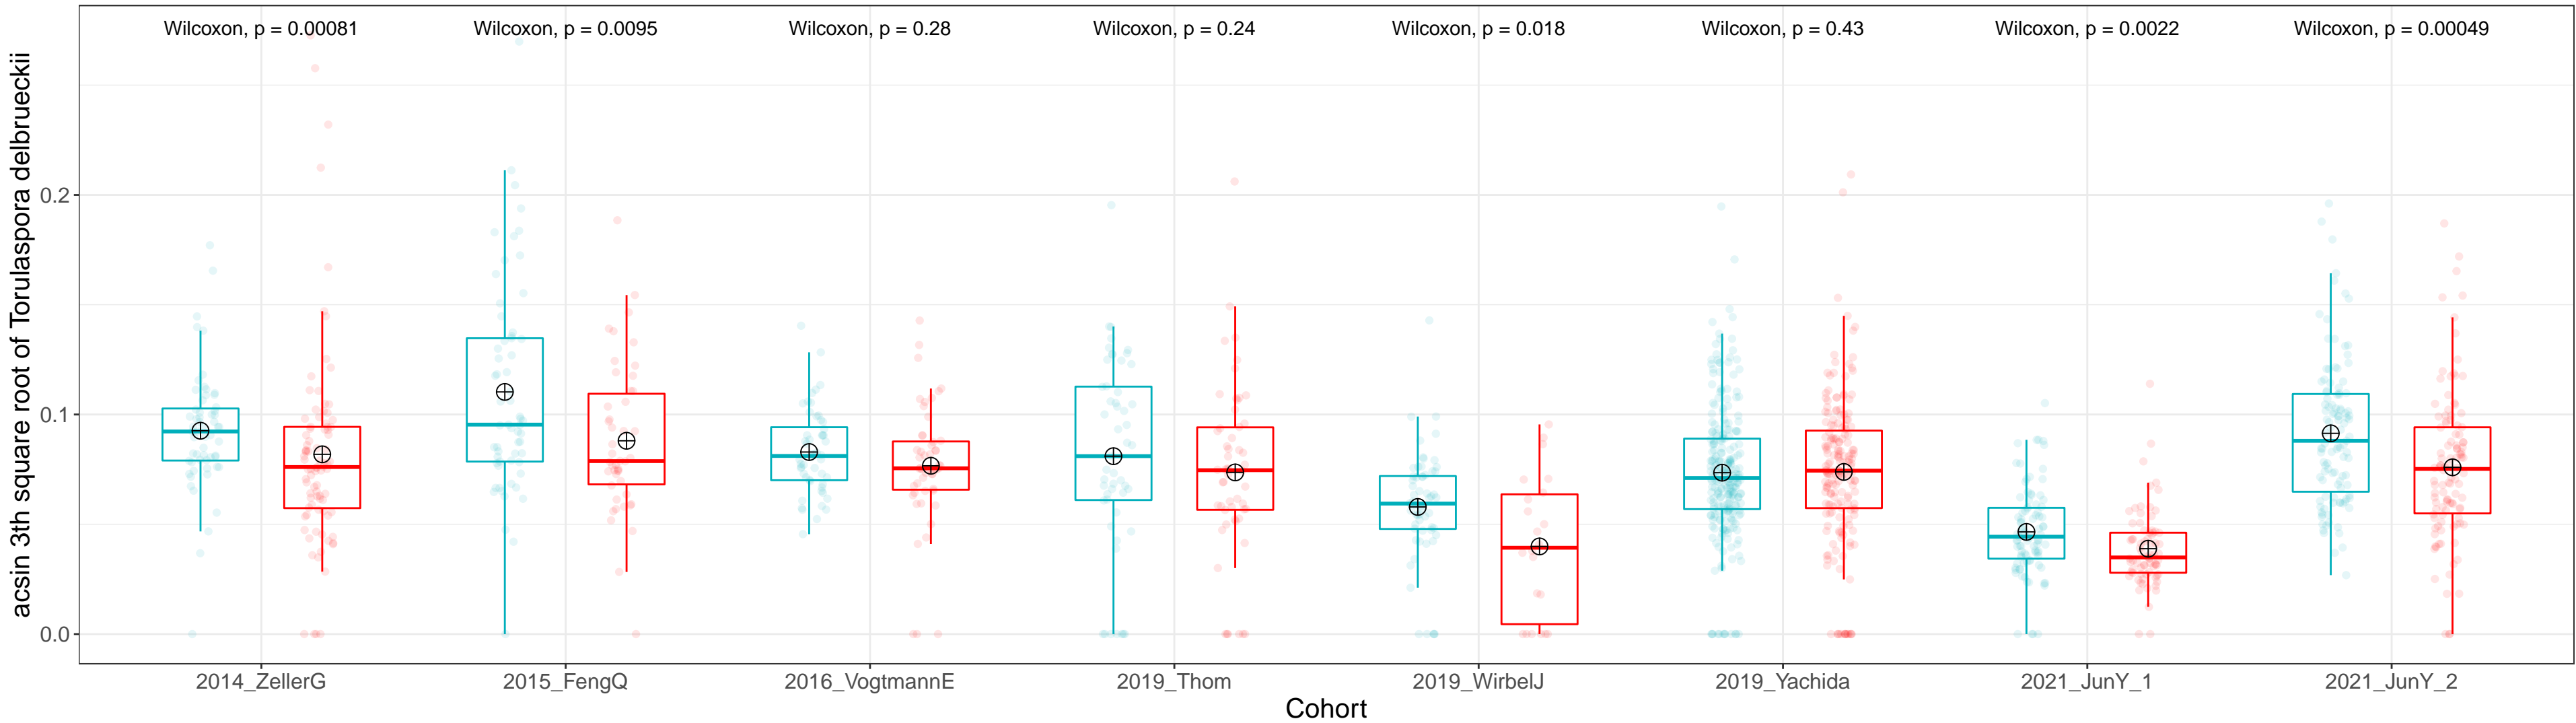

Stage CTRL CRC

Torulaspora delbrueckii

7 cohorts has same trend in depleted in CRC.
5 cohorts play significant different.

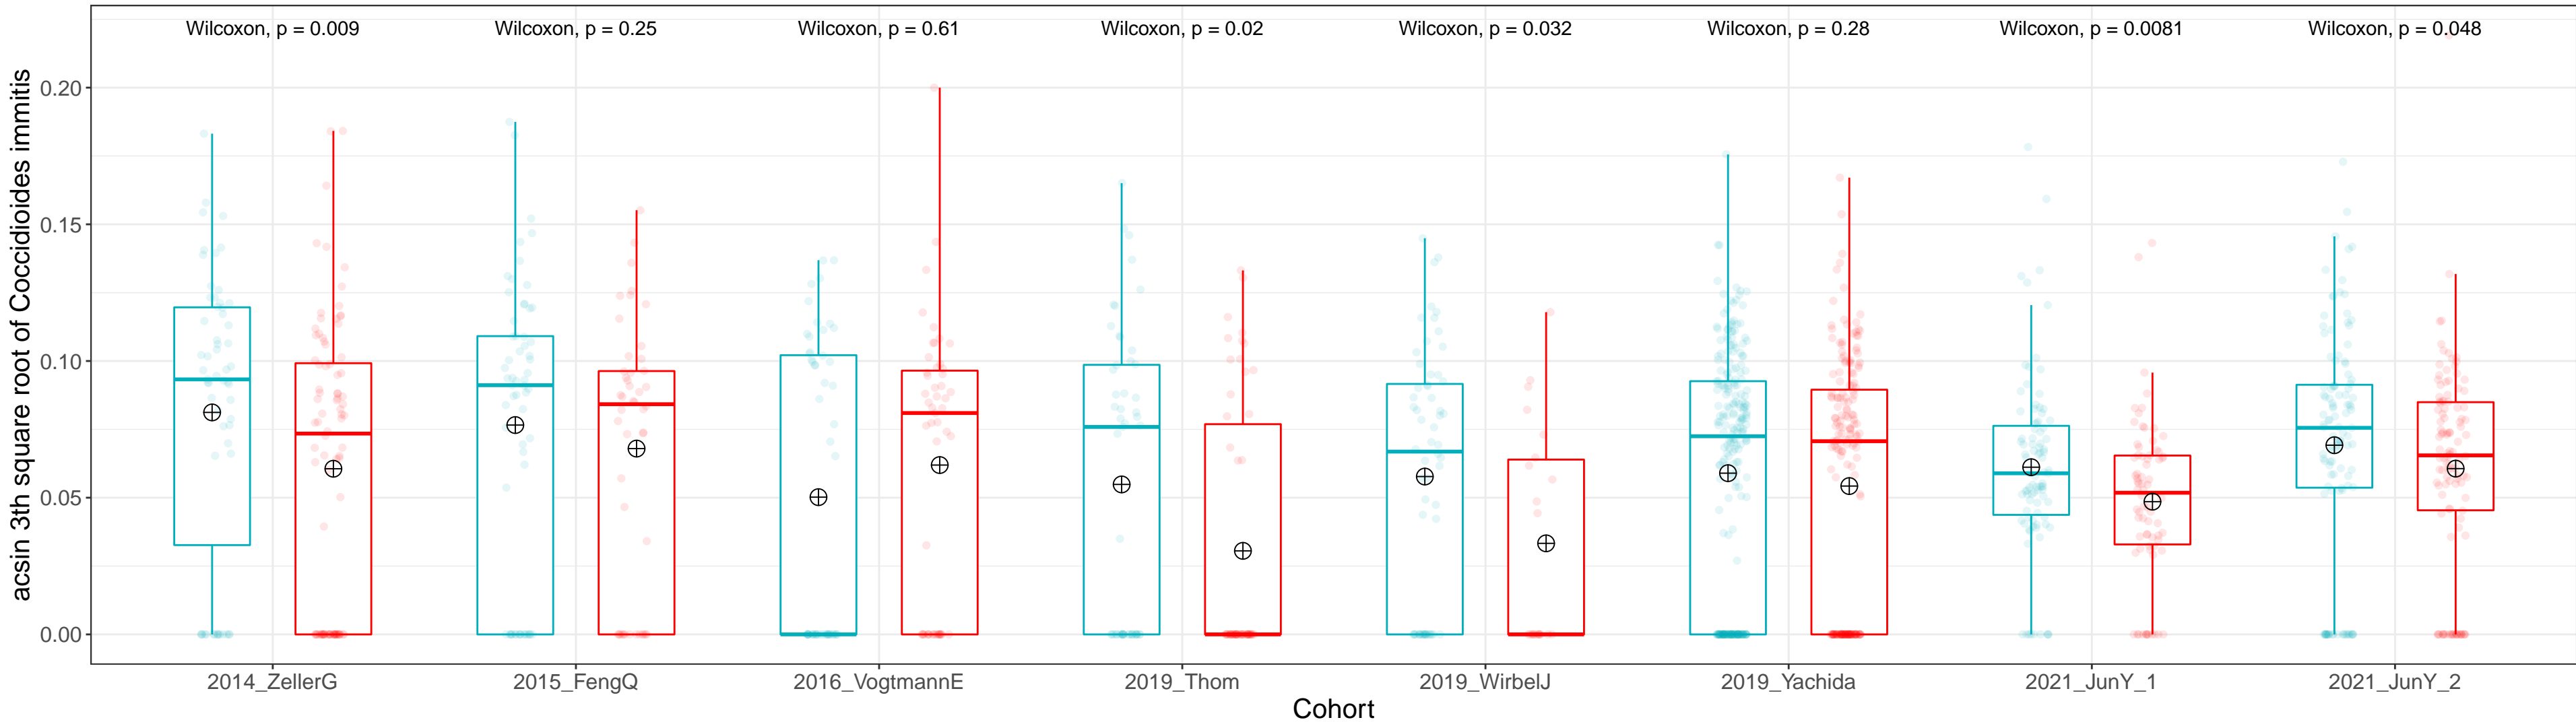

Stage  CTRL  CRC

Coccidioides immitis

7 cohorts has same trend in depleted in CRC.
5 cohorts play significant different.

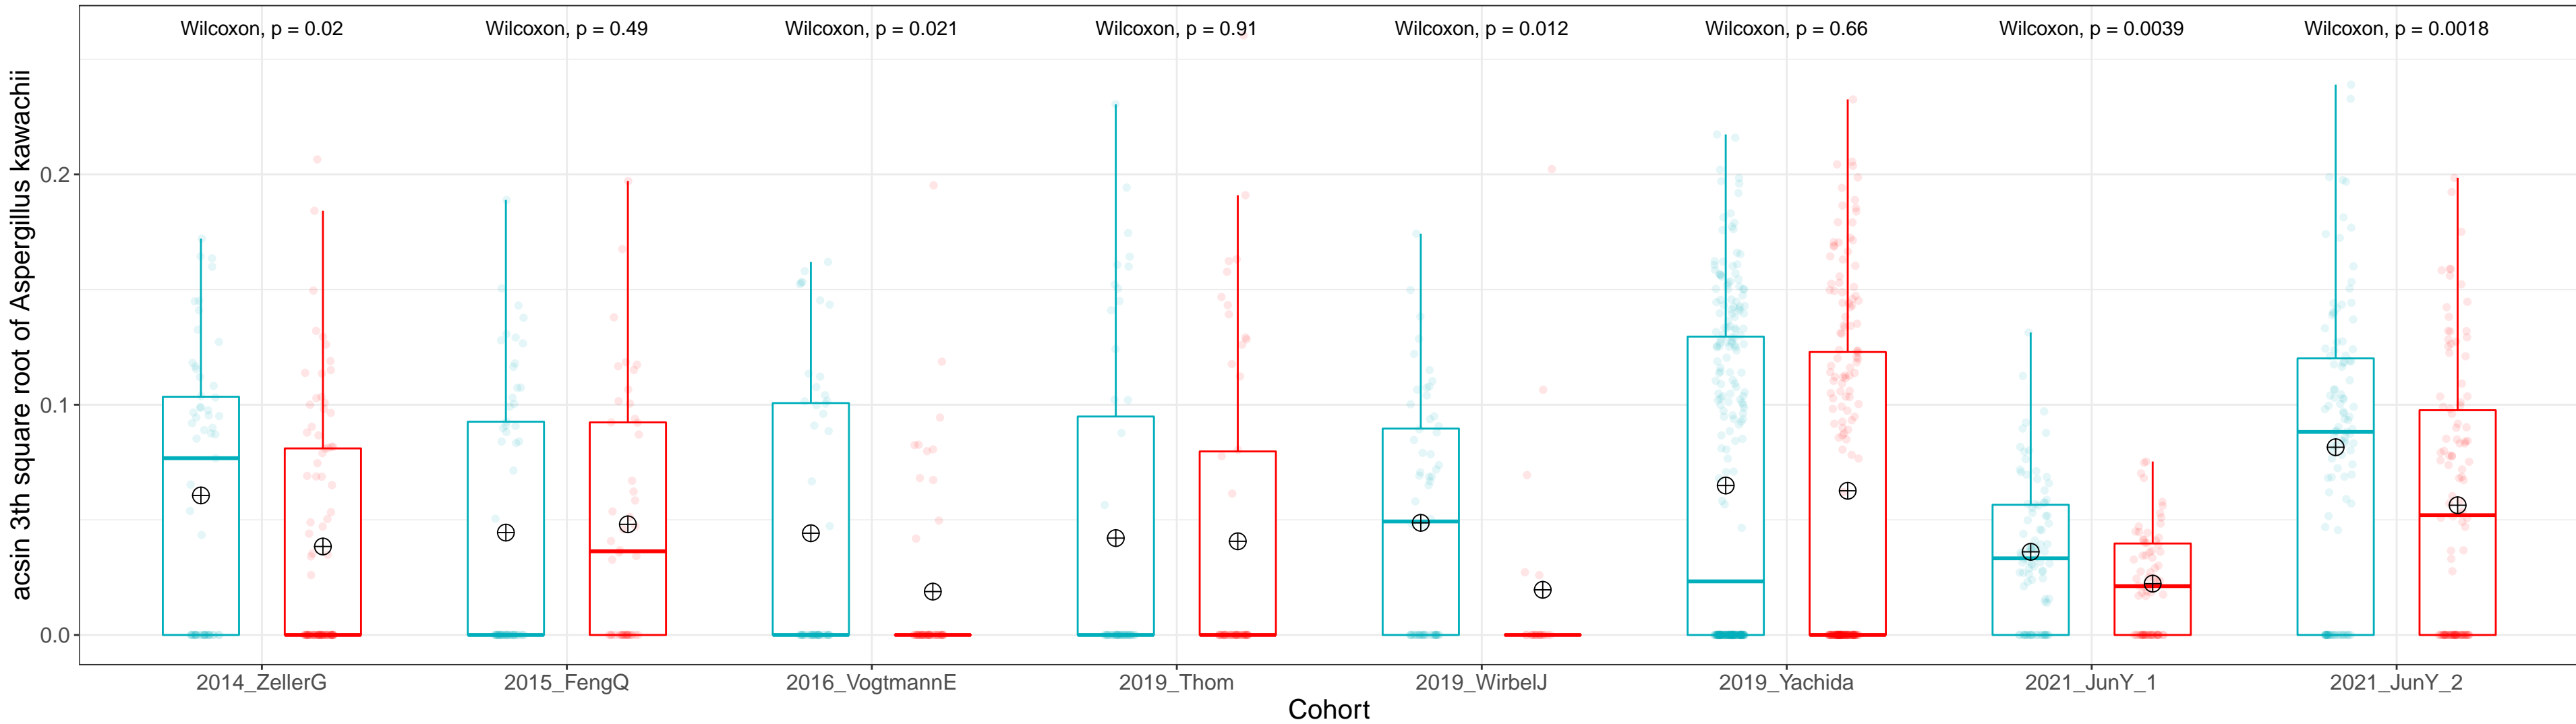

Stage CTRL CRC

Aspergillus kawachii

7 cohorts has same trend in depleted in CRC.
5 cohorts play significant different.

Stage CTRL CRC

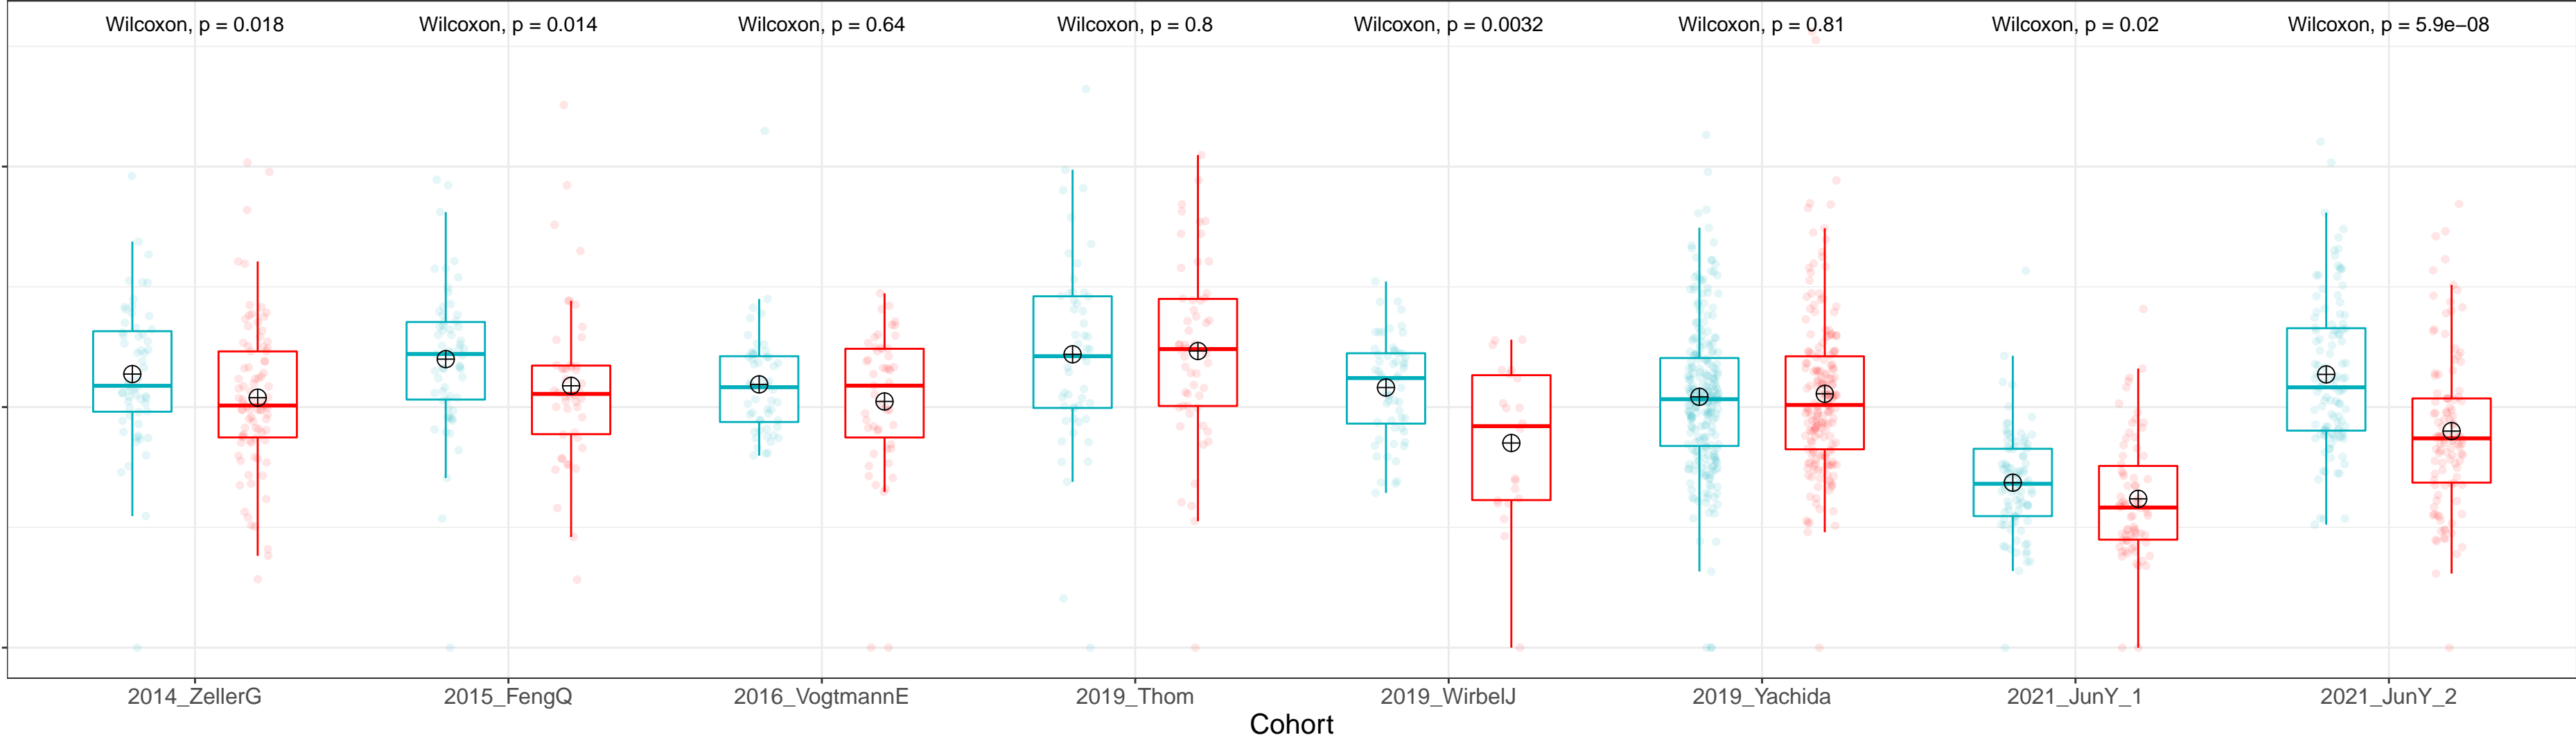

Trichoderma atroviride

7 cohorts has same trend in depleted in CRC.
5 cohorts play significant different.

Stage CTRL CRC

acsin 3th square root of Trichoderma atroviride

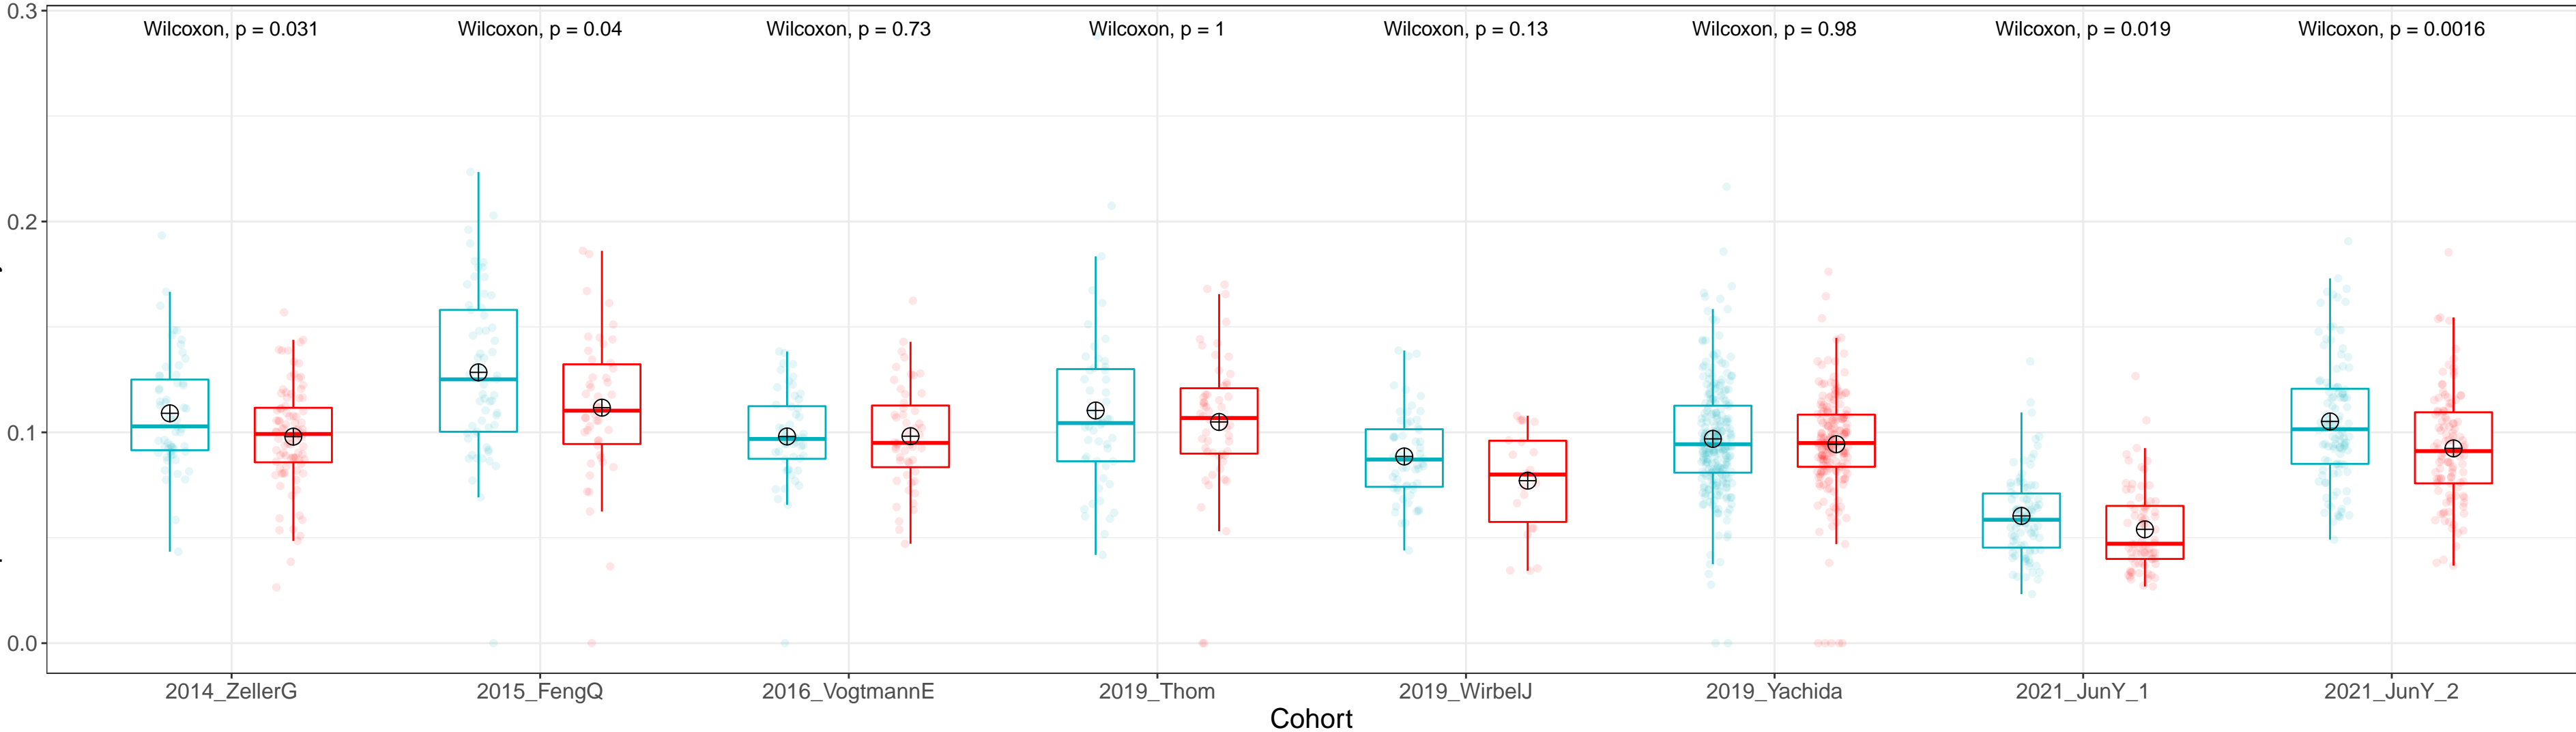

Batrachochytrium salamandrivorans

8 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

Stage CTRL CRC

acsin 3th square root of Batrachochytrium salamandrivorans

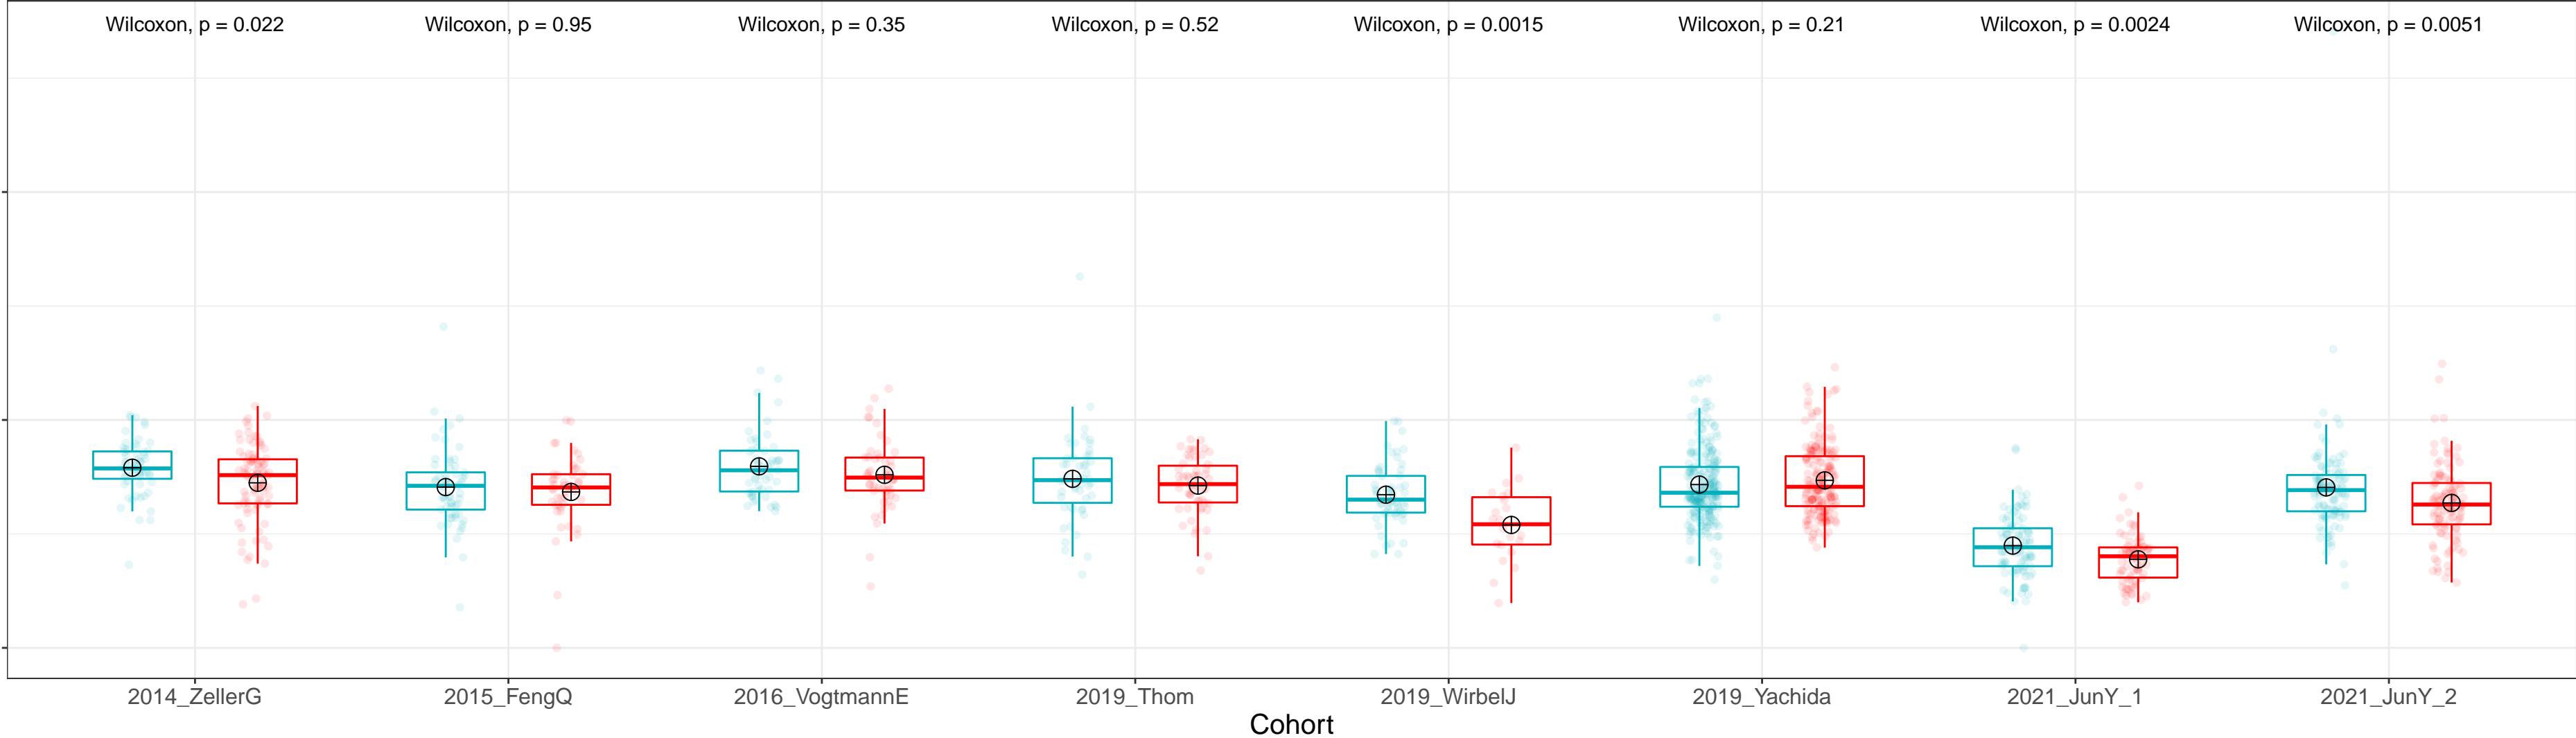

Mucor circinelloides

7 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

Stage CTRL CRC

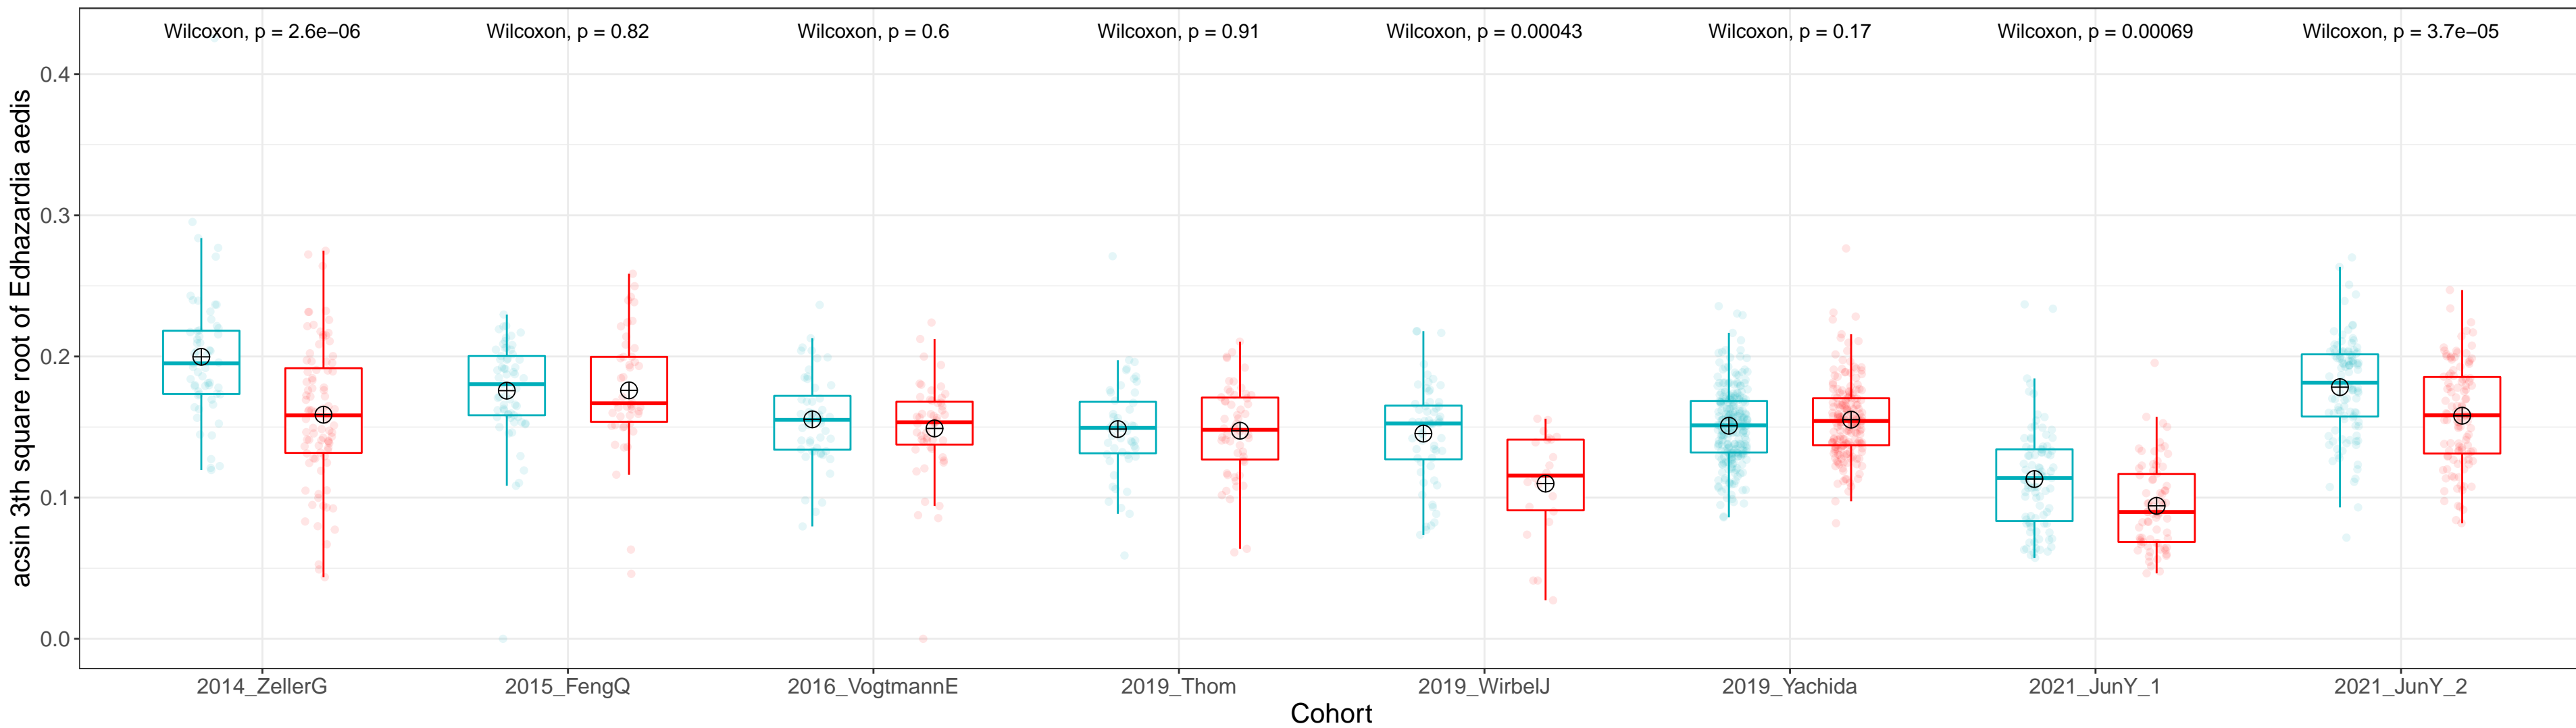

acsin 3th square root of Mucor circinelloides

Edhazardia aedis

7 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

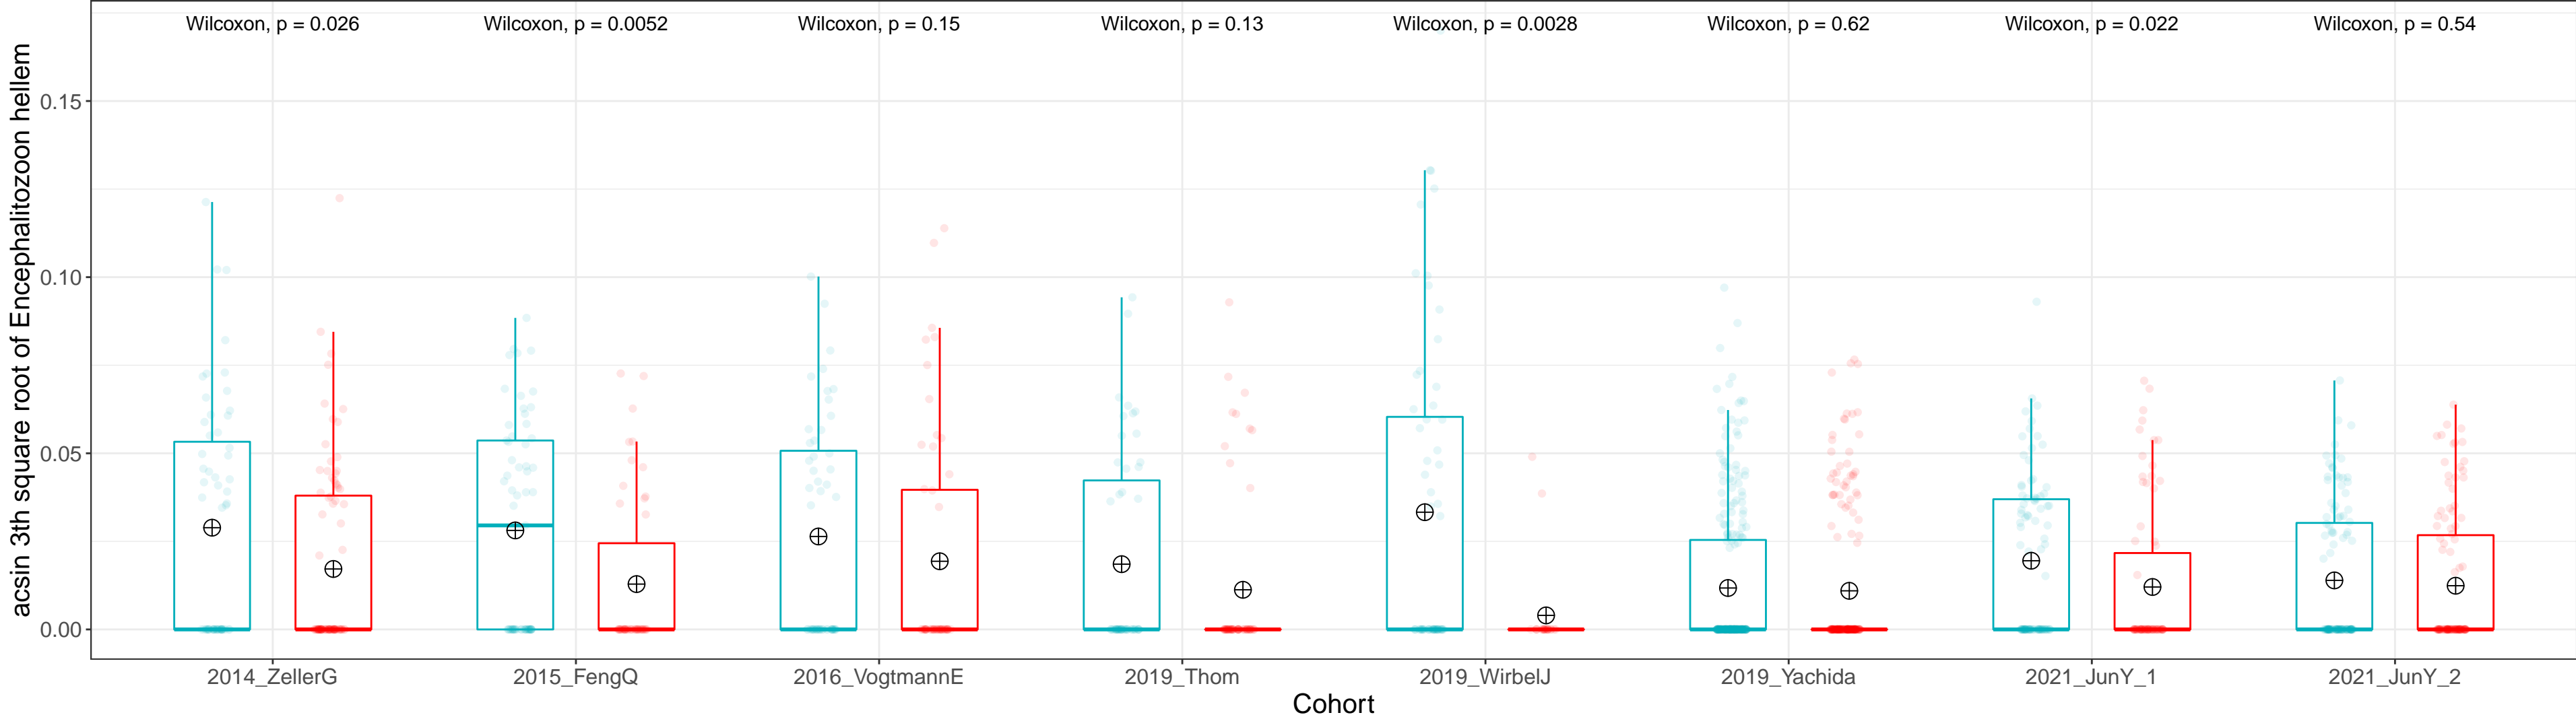

Stage CTRL CRC

Encephalitozoon hellem

8 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

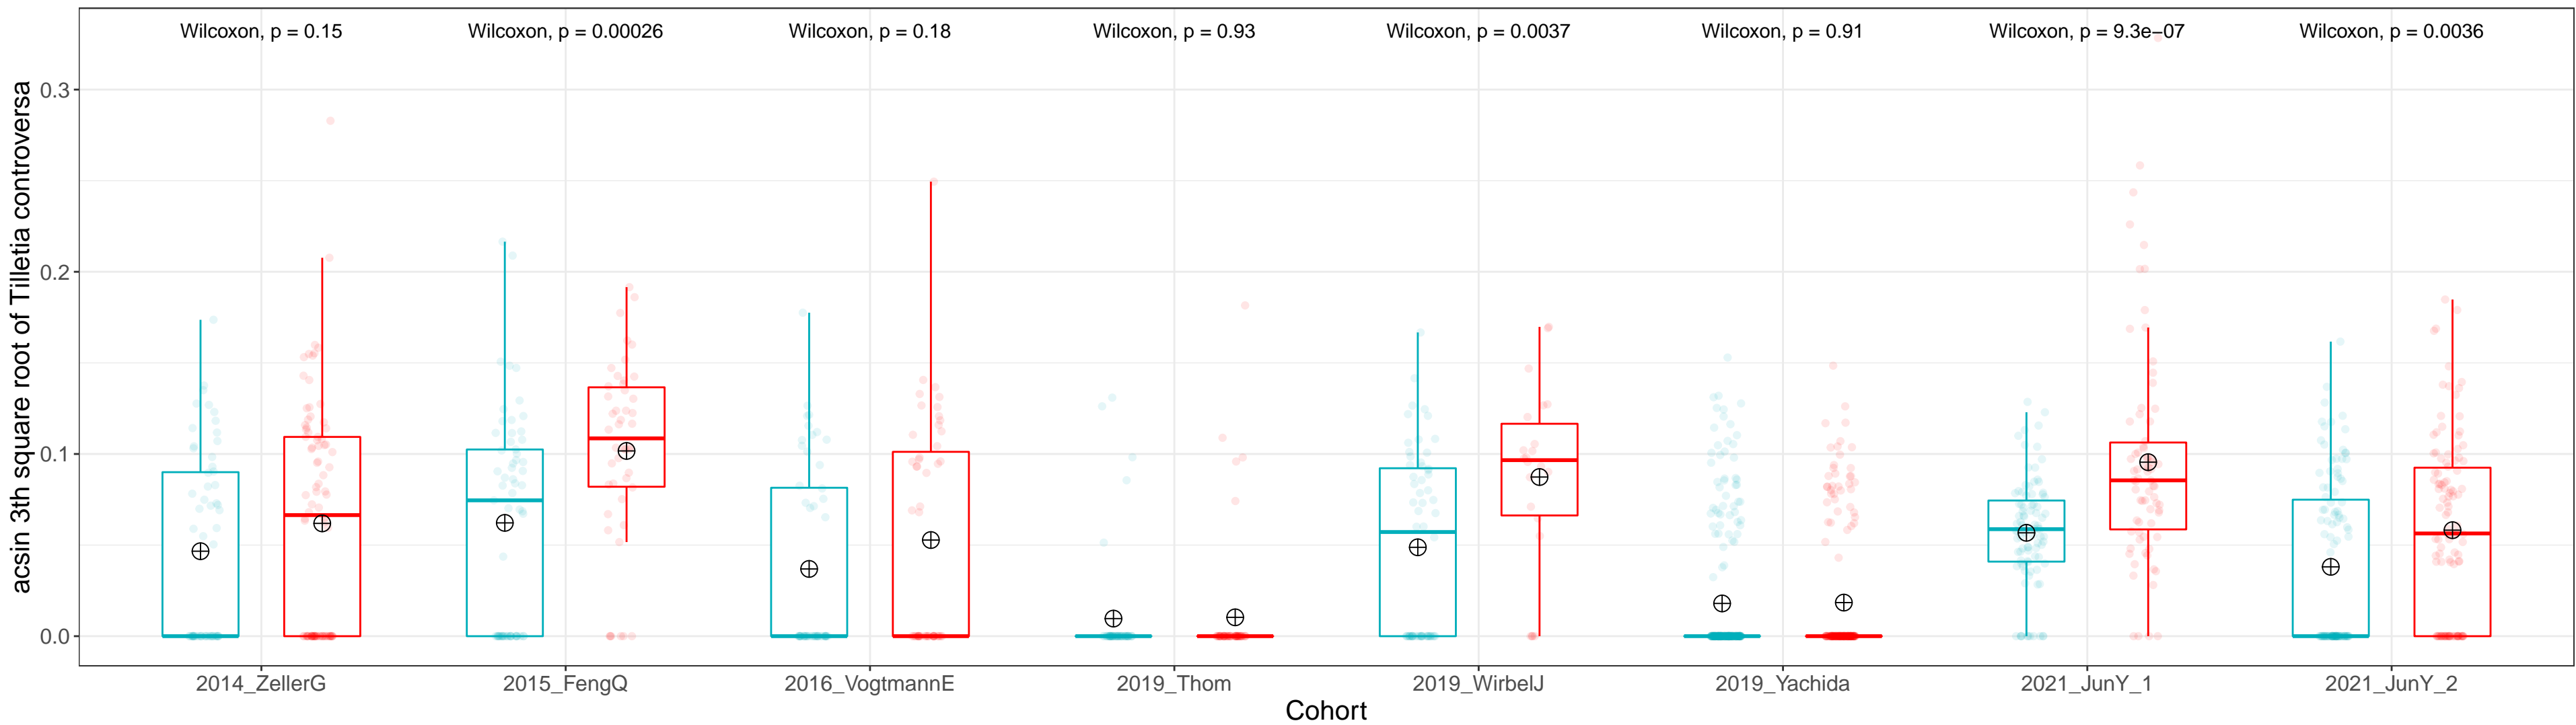

Stage CTRL CRC

Tilletia controversa

7 cohorts has same trend in enticed in CRC
4 cohorts play significant different.

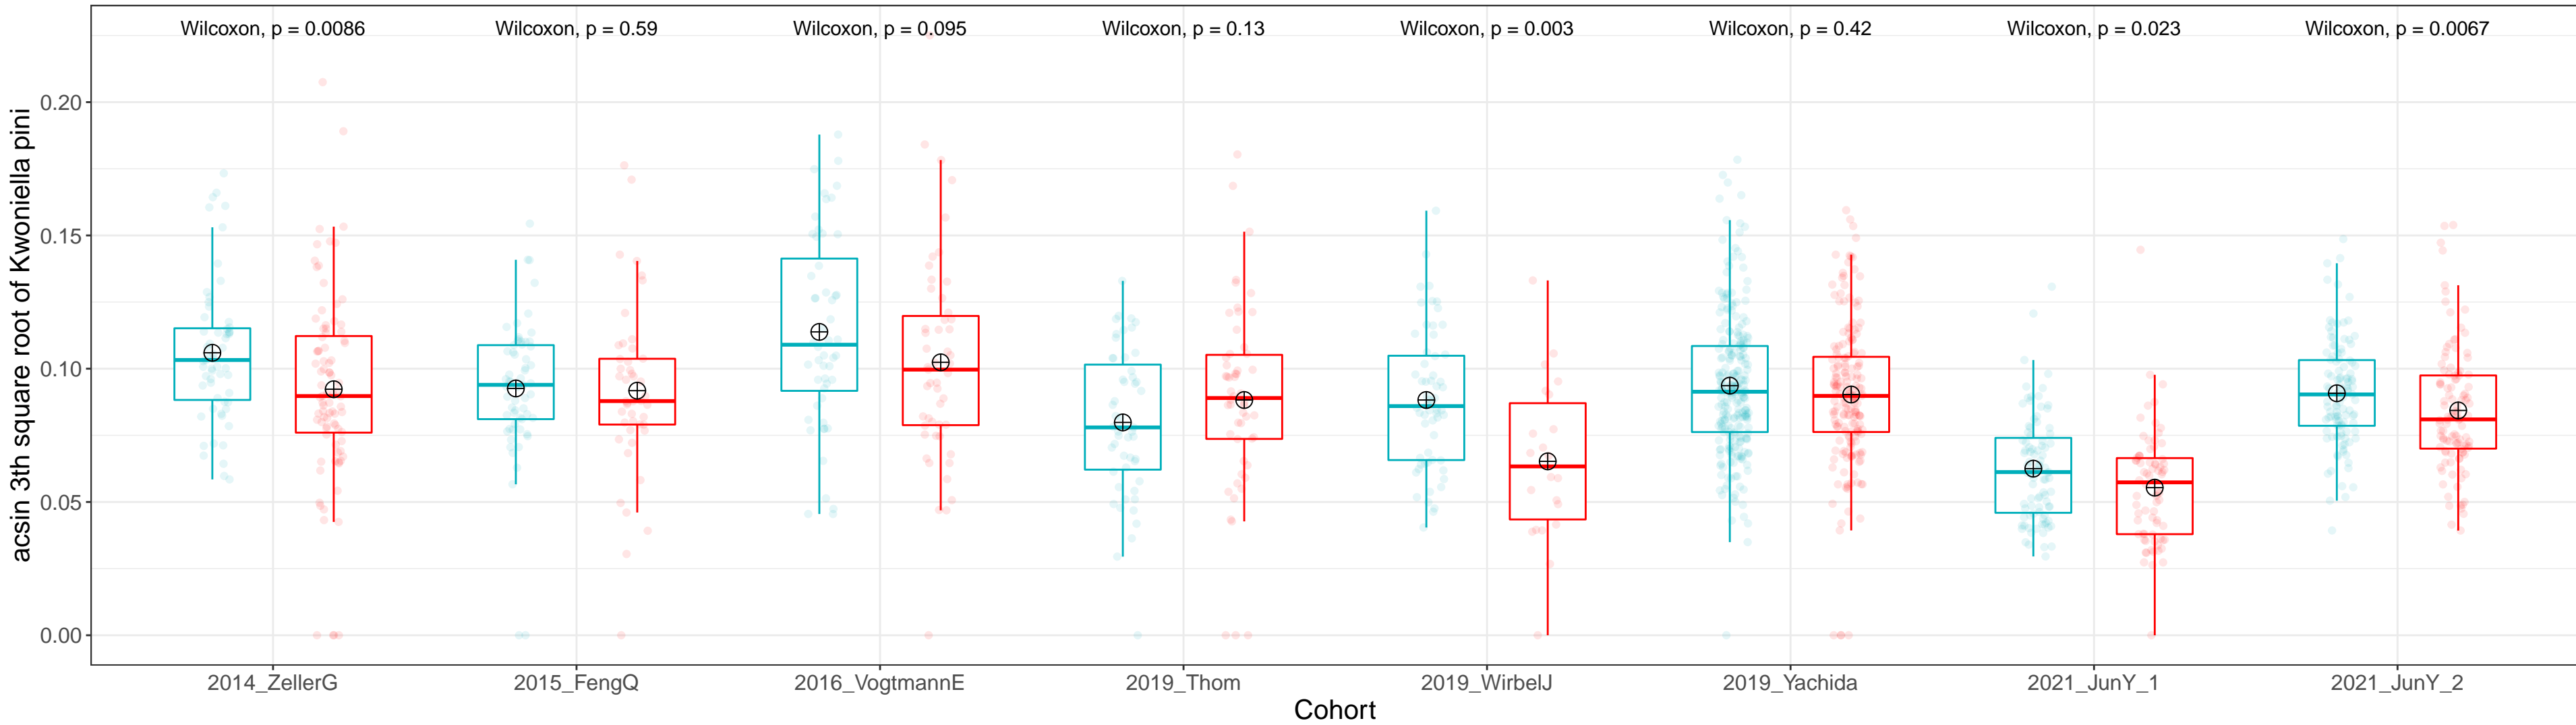

Stage  CTRL  CRC

Kwoniella pini

7 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

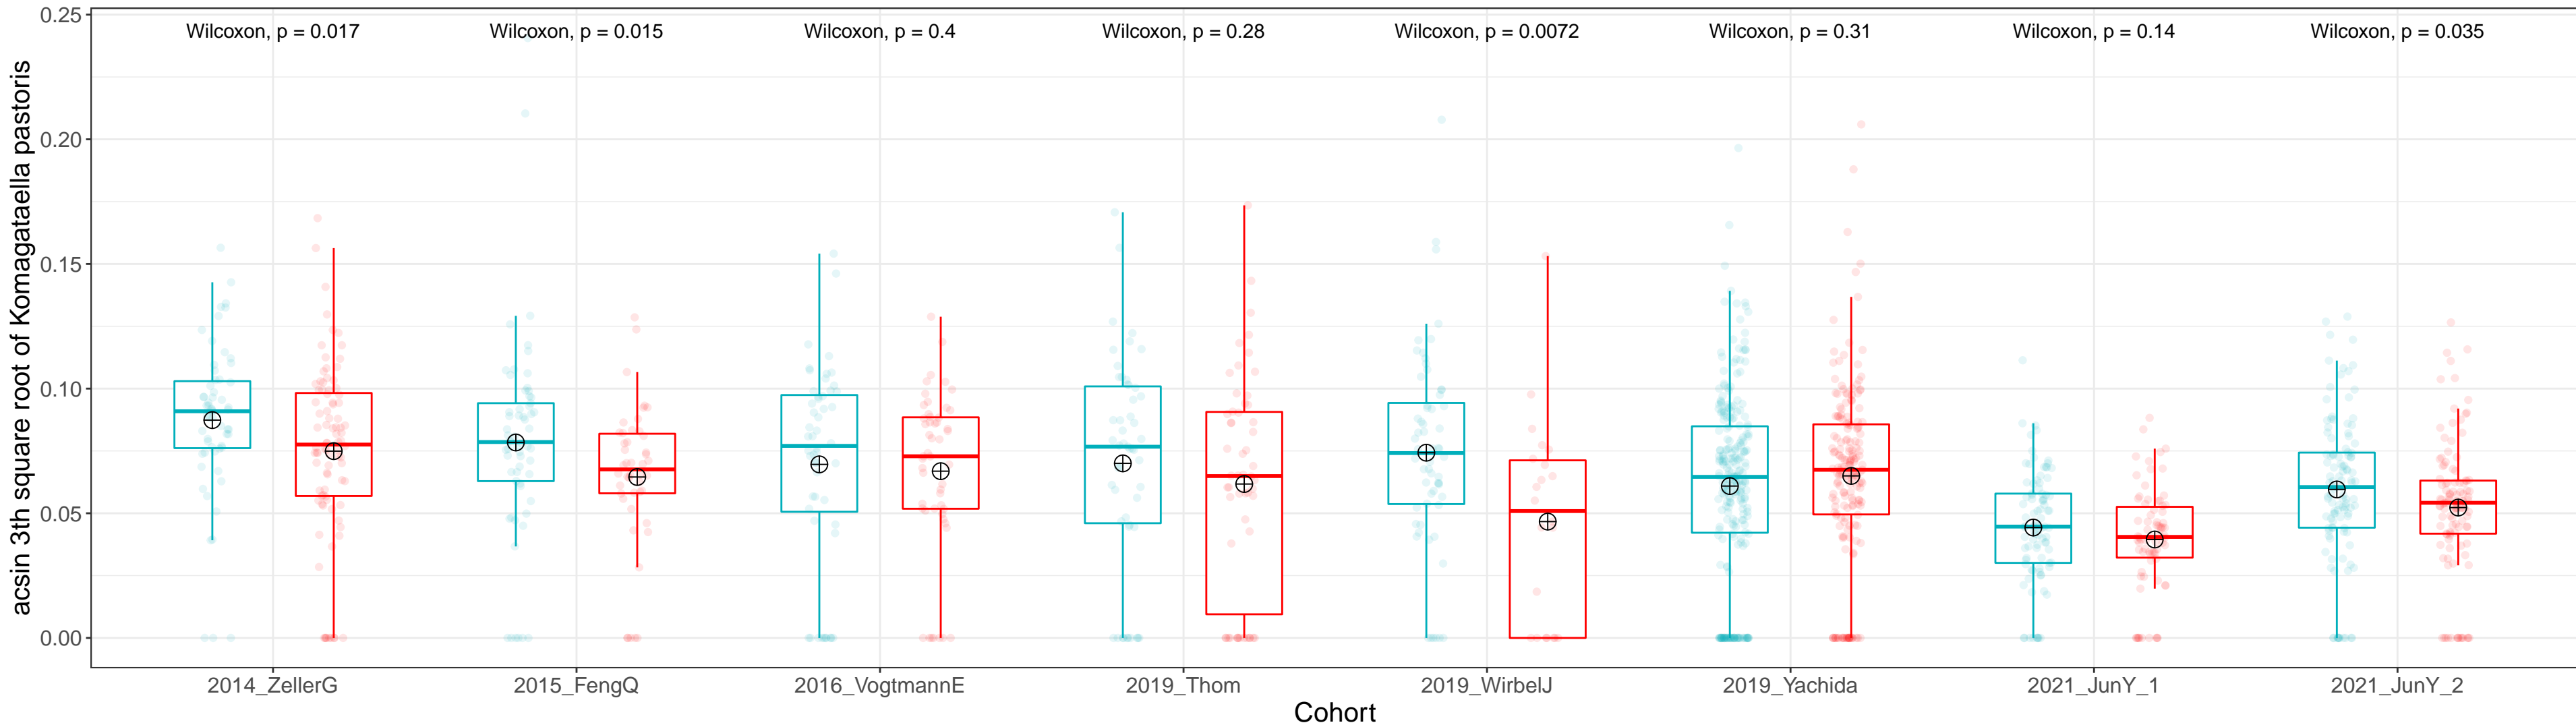

Stage CTRL CRC

Komagataella pastoris

7 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

Stage CTRL CRC

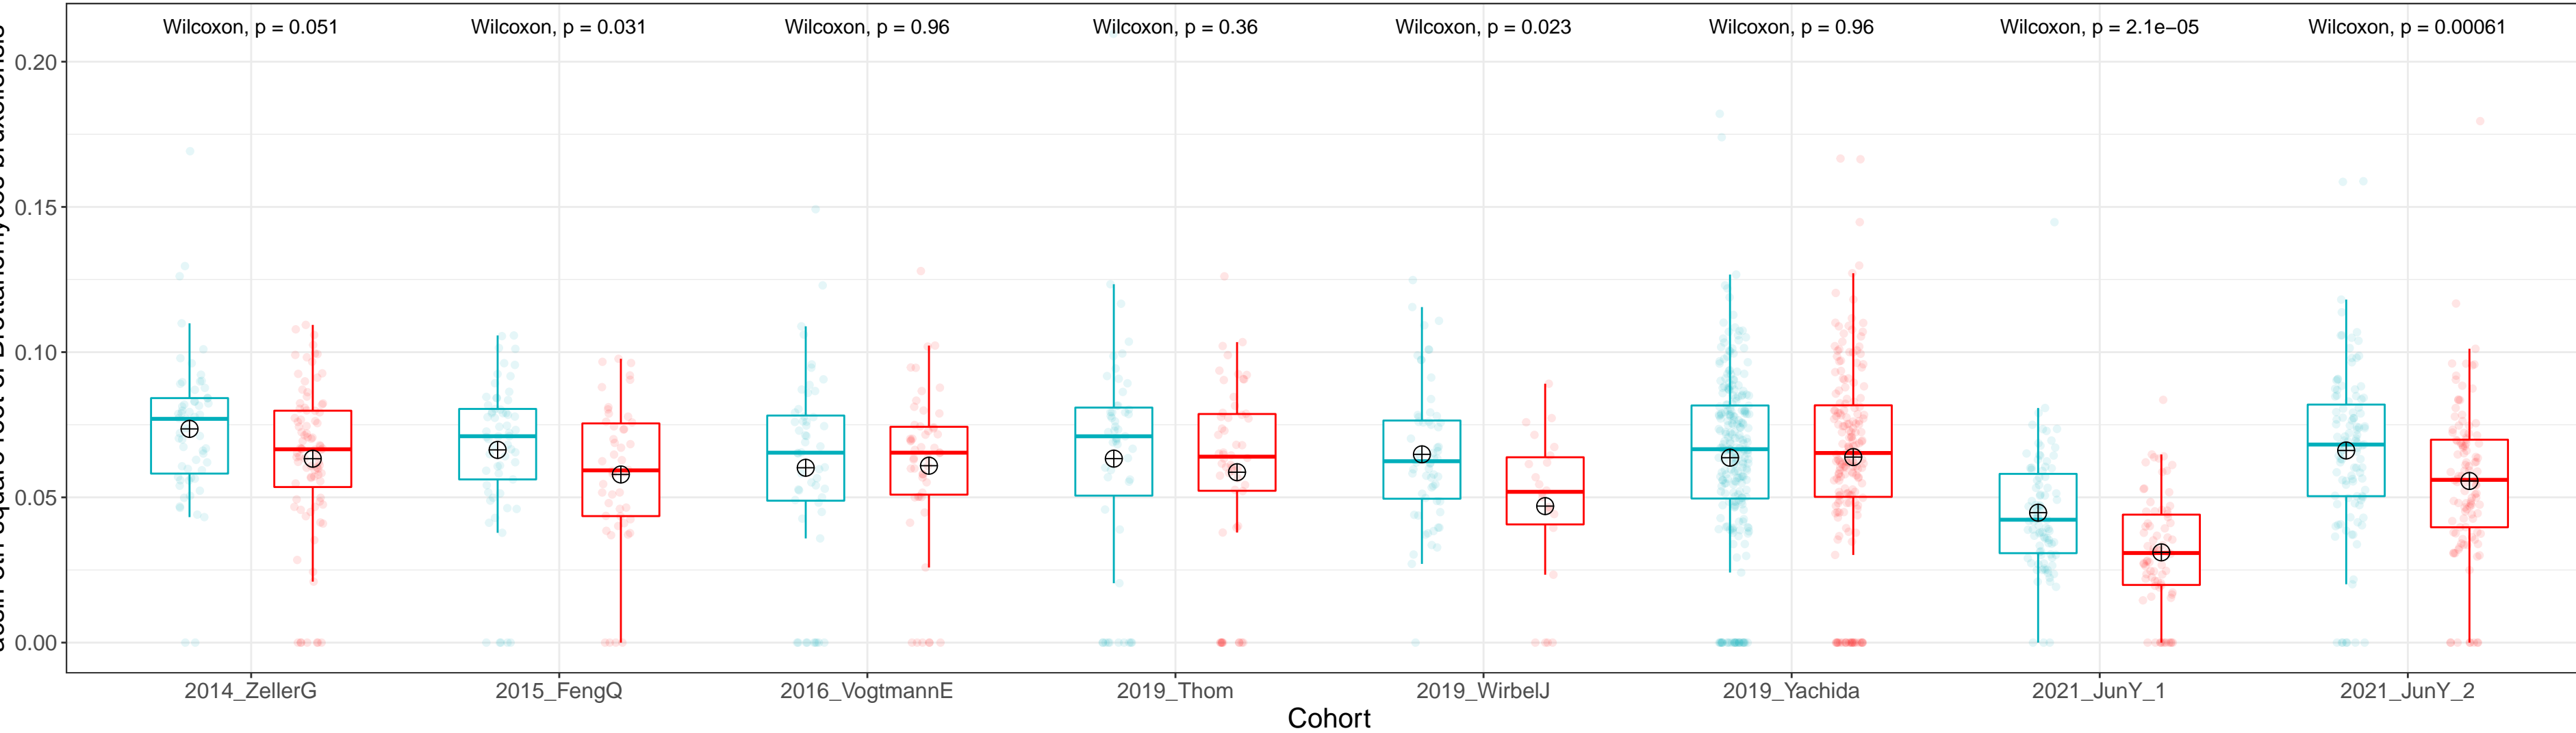

Brettanomyces bruxellensis

7 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

Stage CTRL CRC

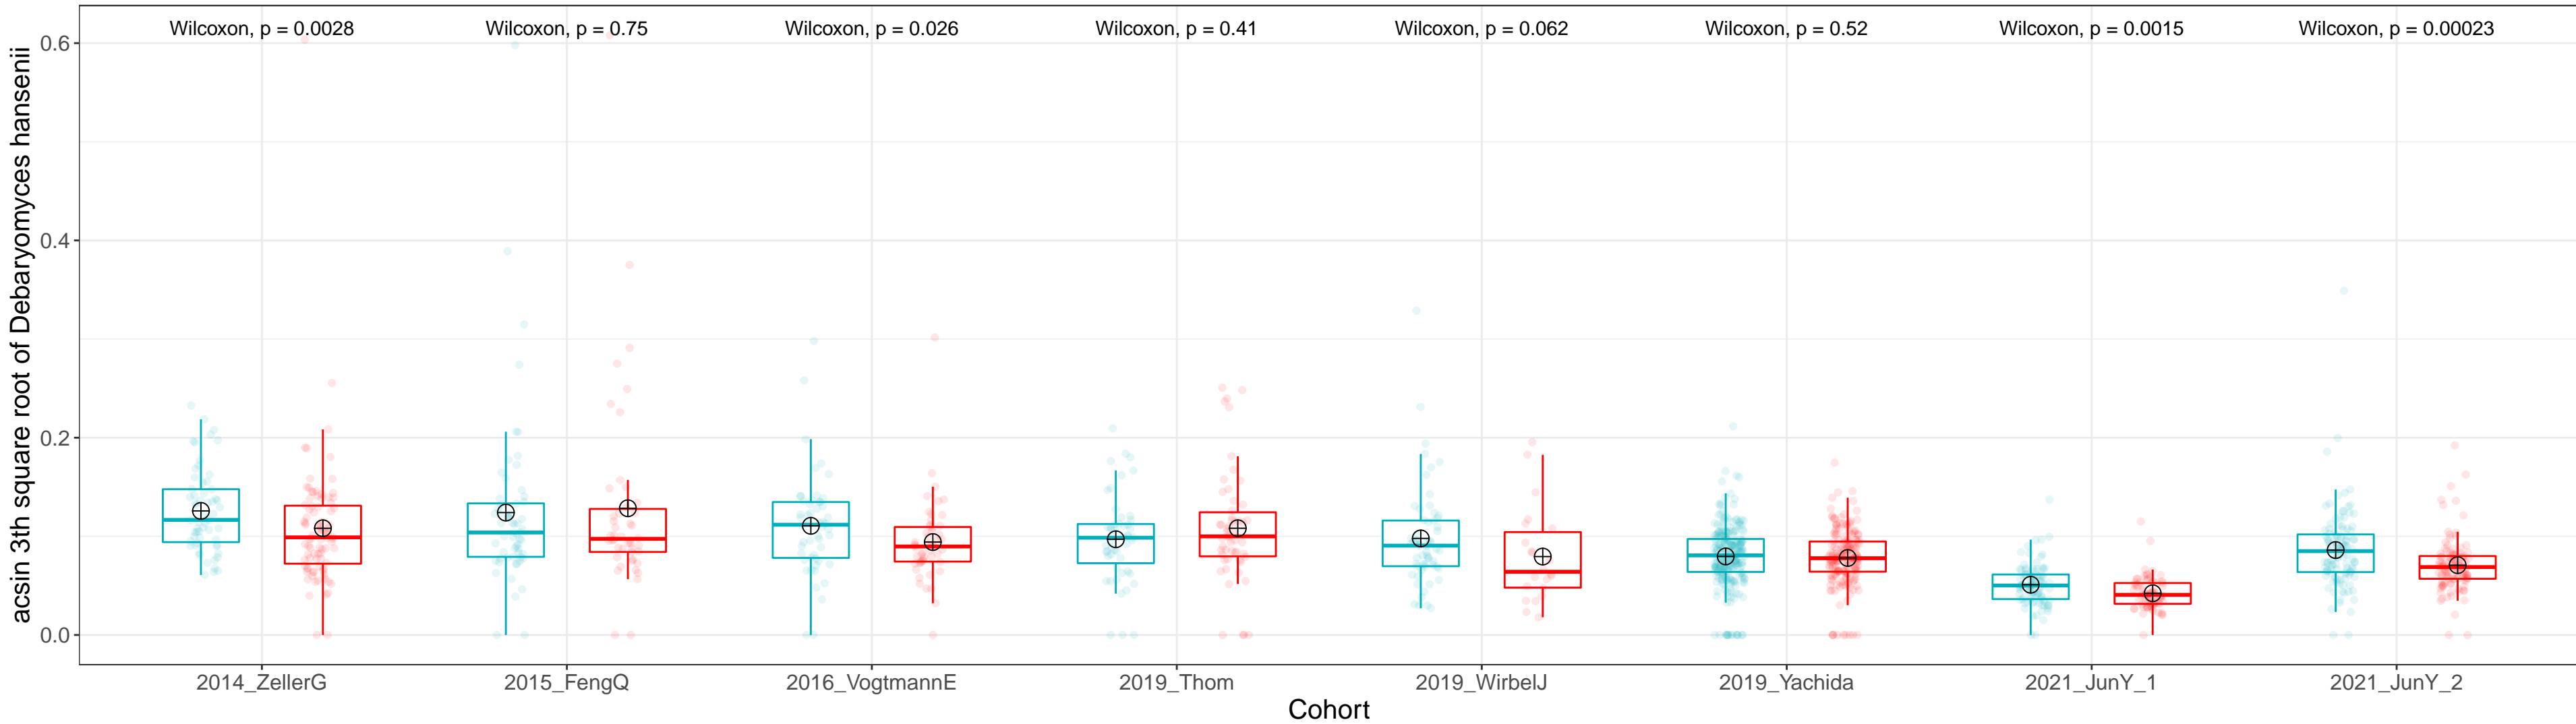

accin 3th square root of Brettanomyces bruxellensis

Debaryomyces hansenii

7 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

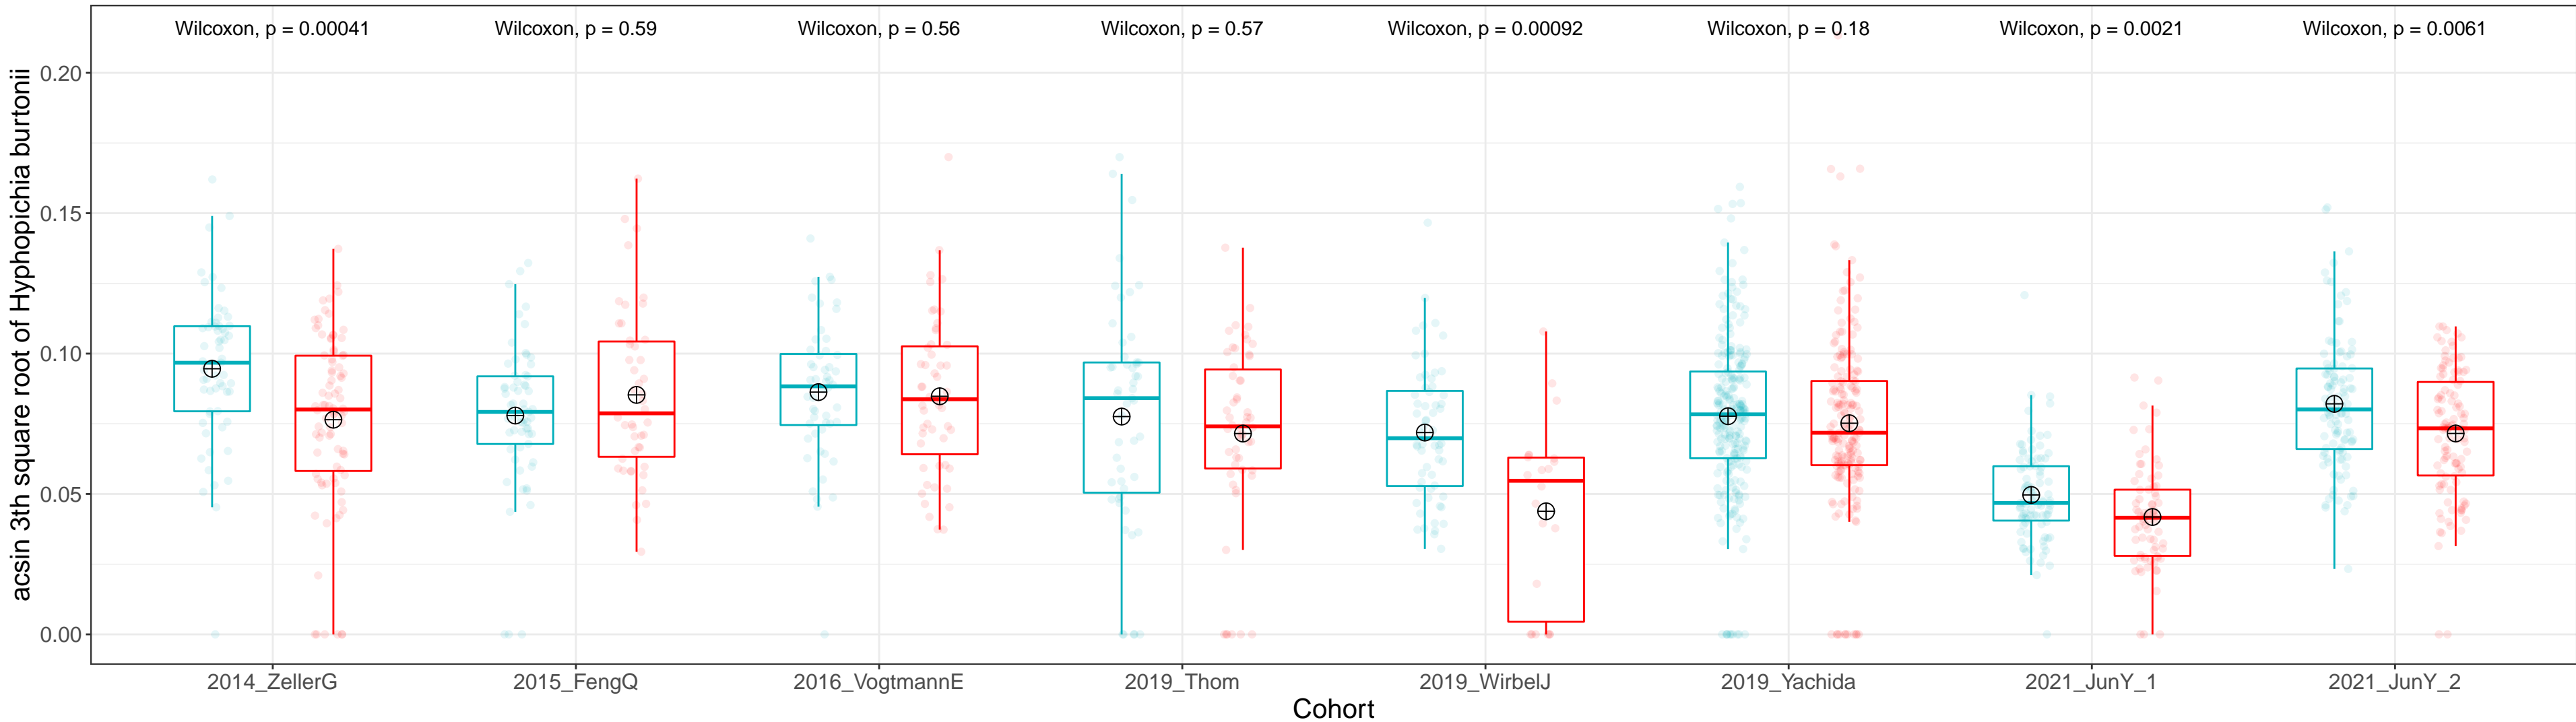

Stage CTRL CRC

Hyphopichia burtonii

7 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

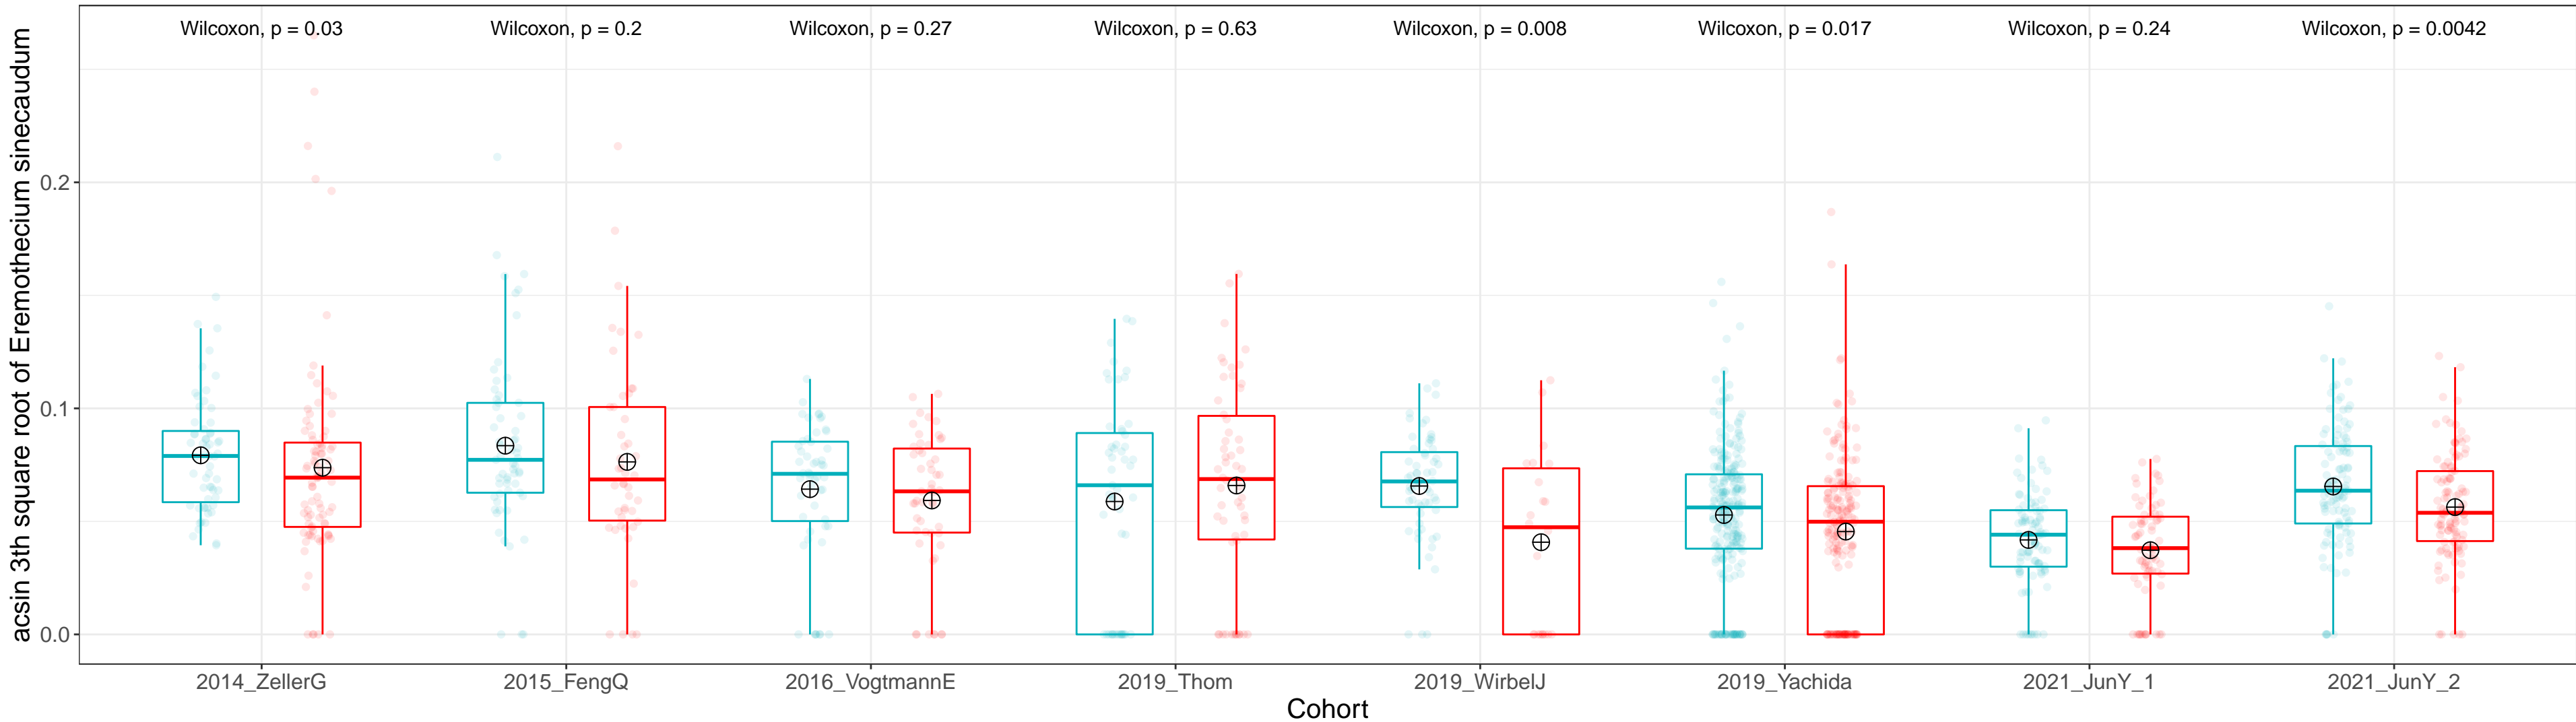

Stage CTRL CRC

Eremothecium sinecaudum

7 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

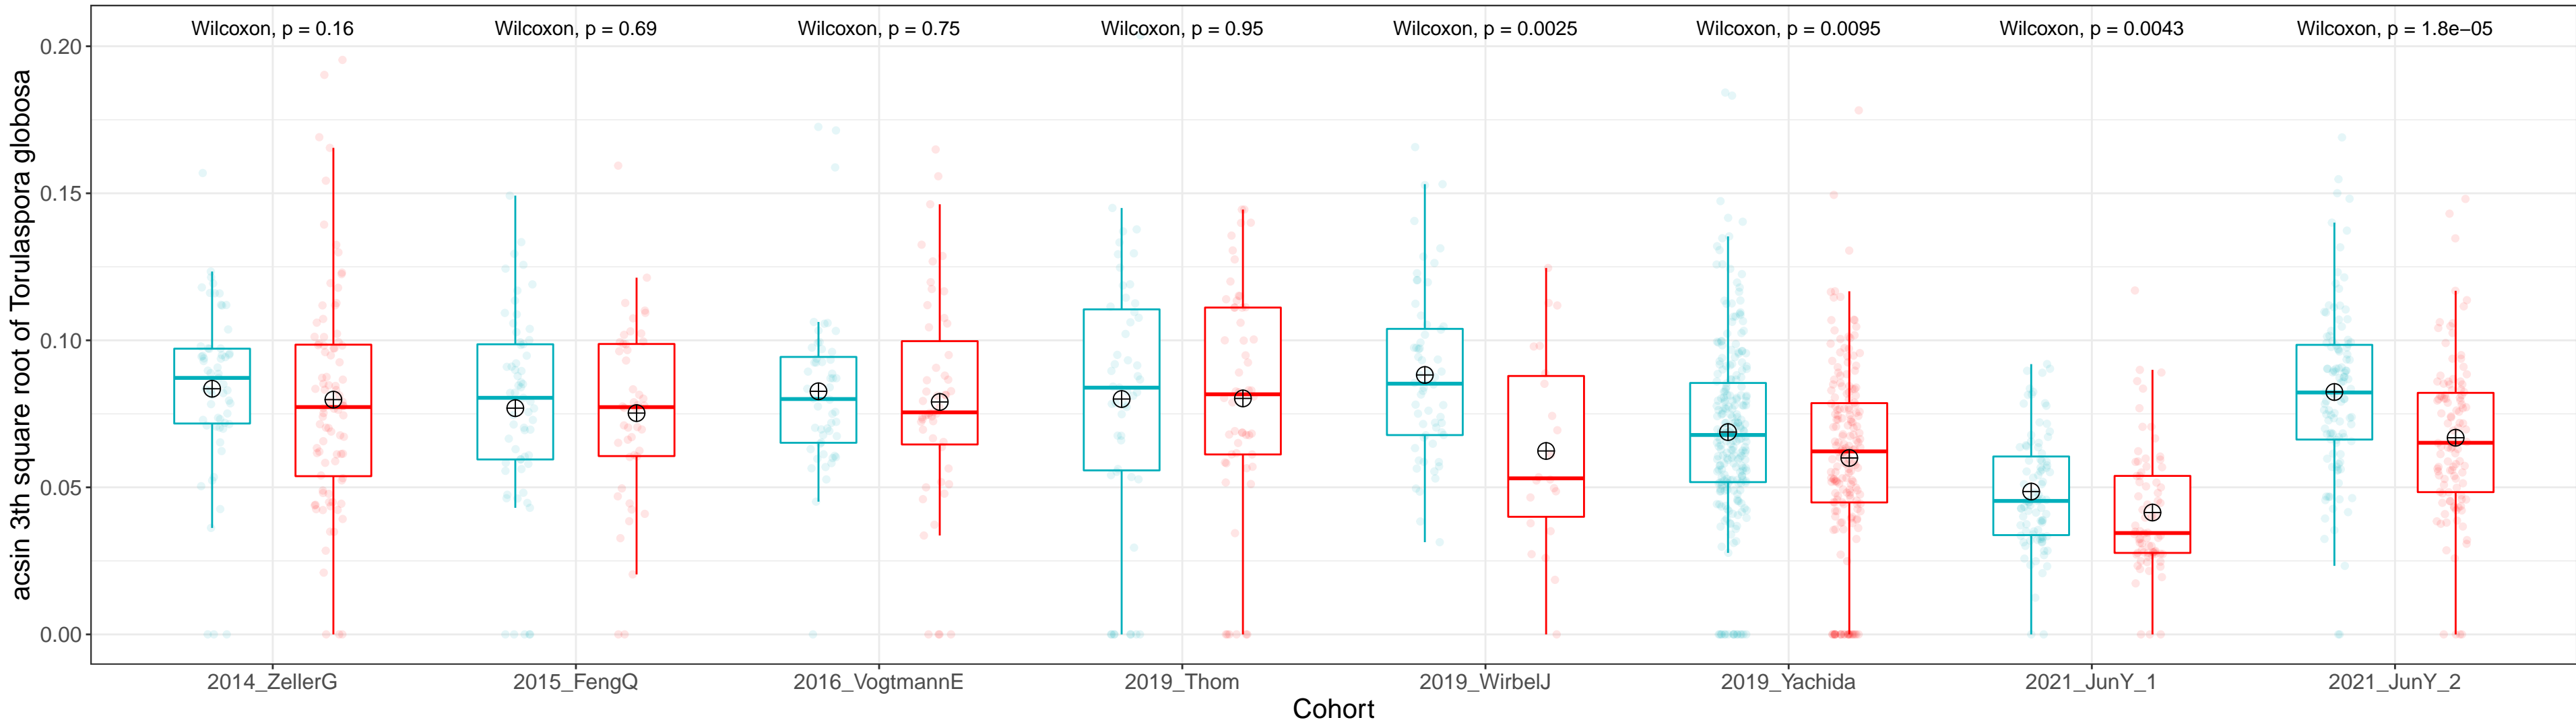

Stage  CTRL  CRC

Torulaspora globosa

7 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

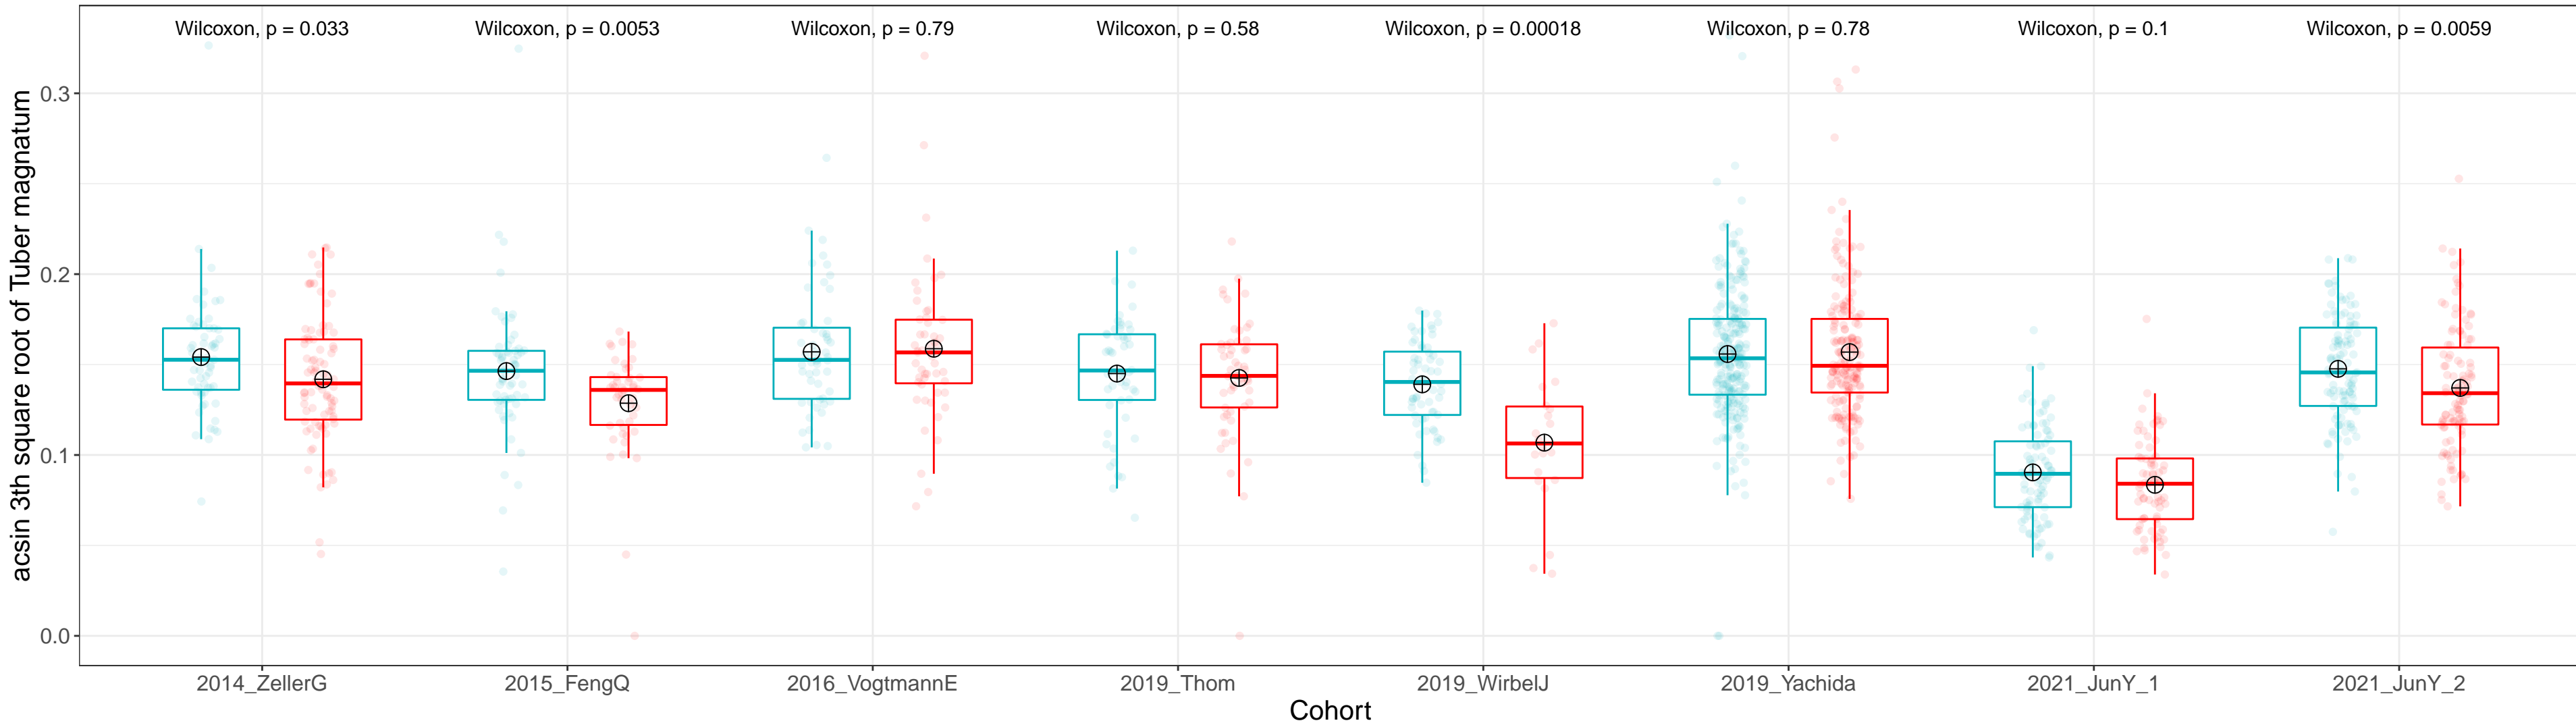

Stage CTRL CRC

Tuber magnatum

7 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

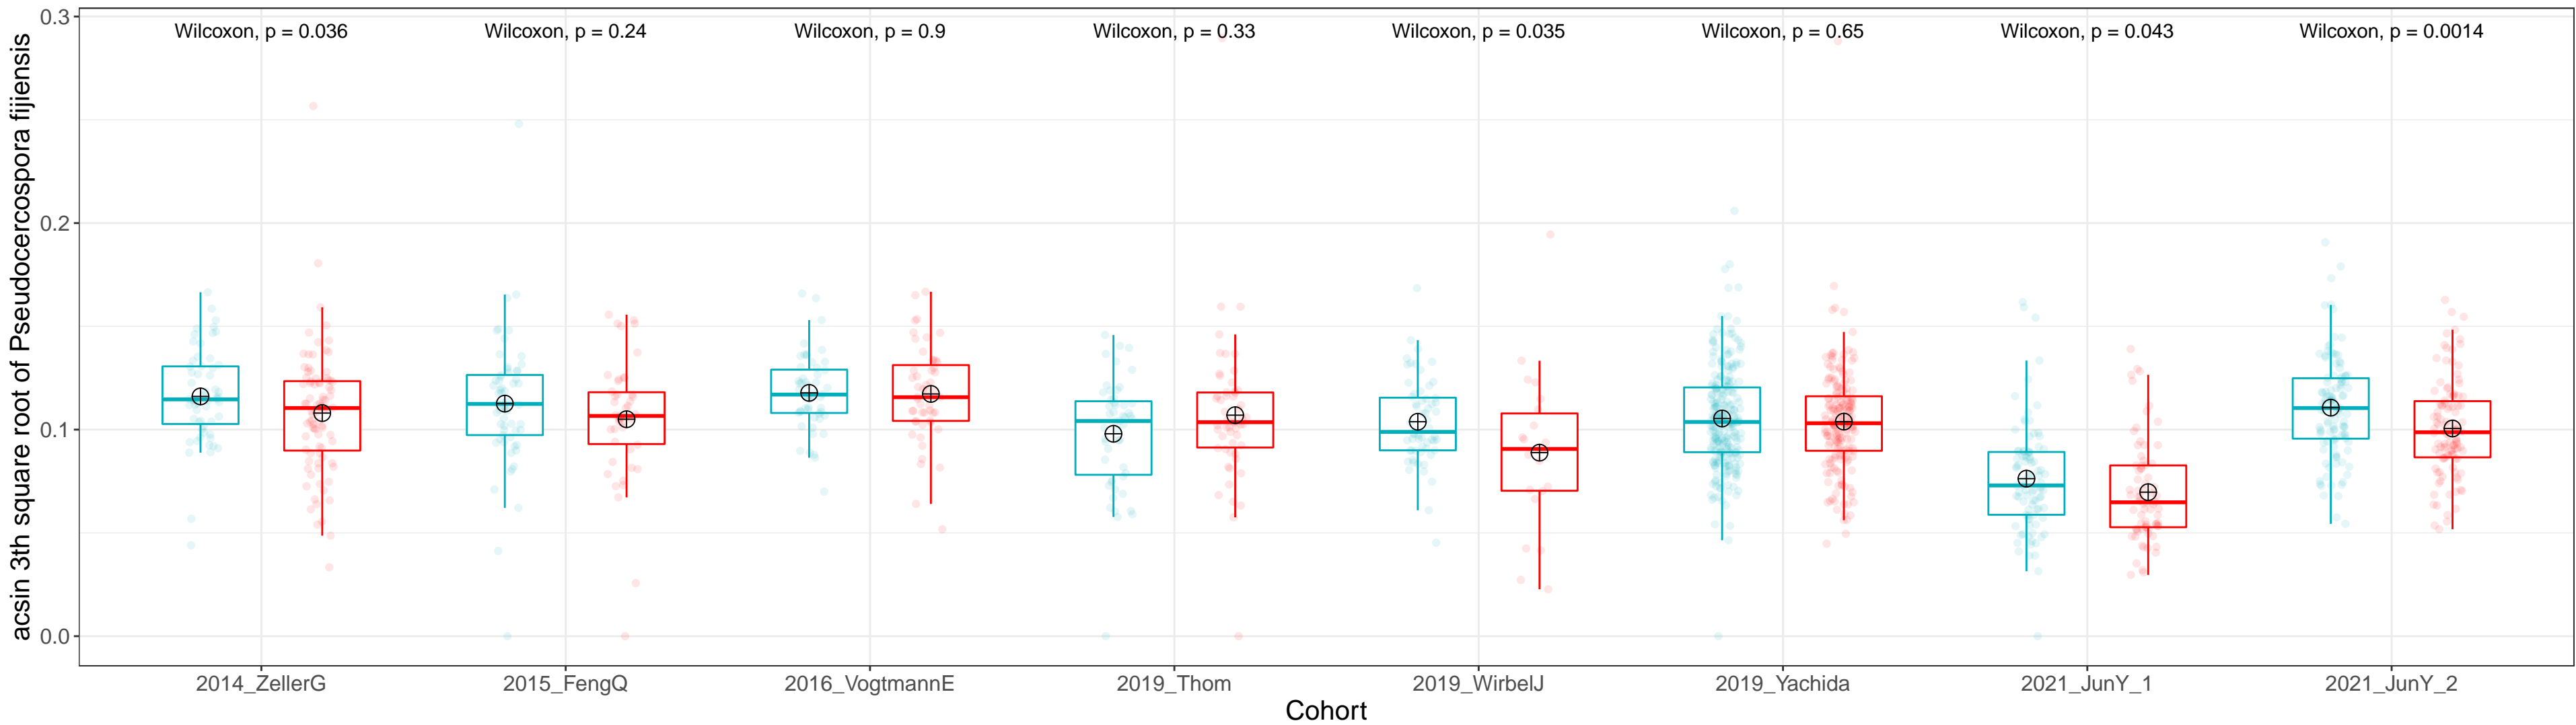

Stage  CTRL  CRC

Pseudocercospora fijiensis

7 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

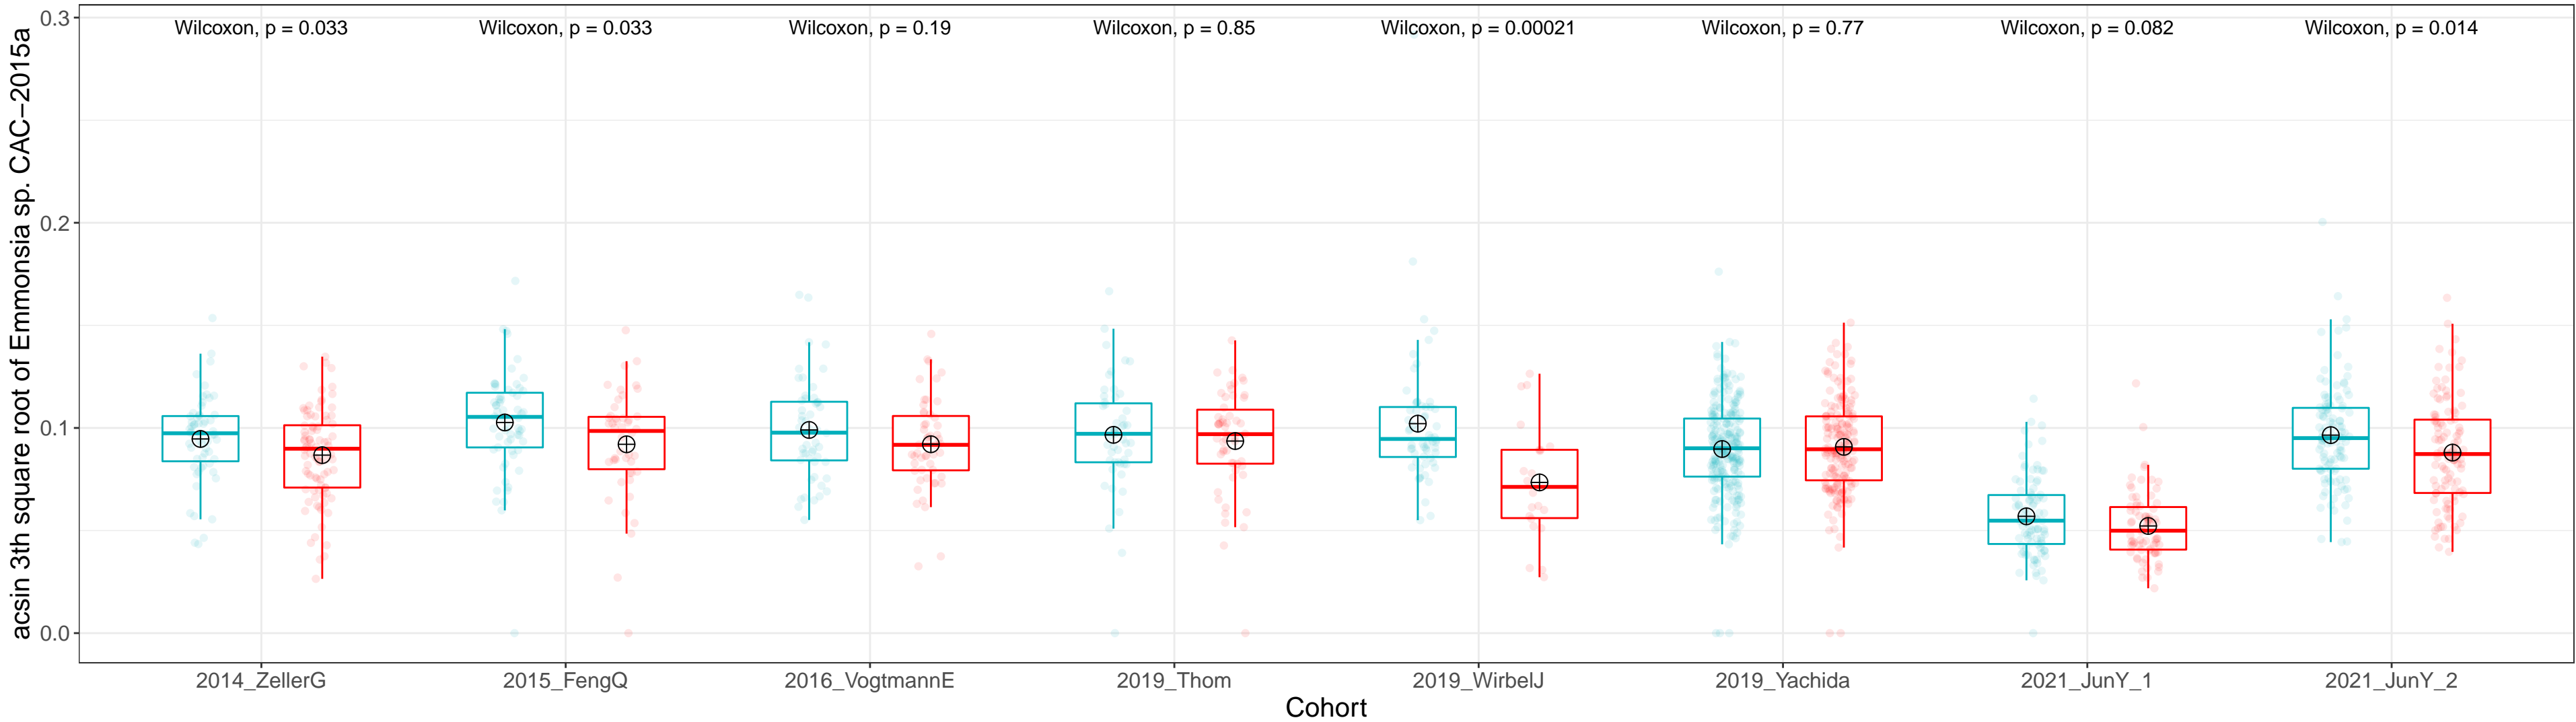

Stage  CTRL  CRC

Emmonsia sp. CAC-2015a

7 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

Stage  CTRL  CRC

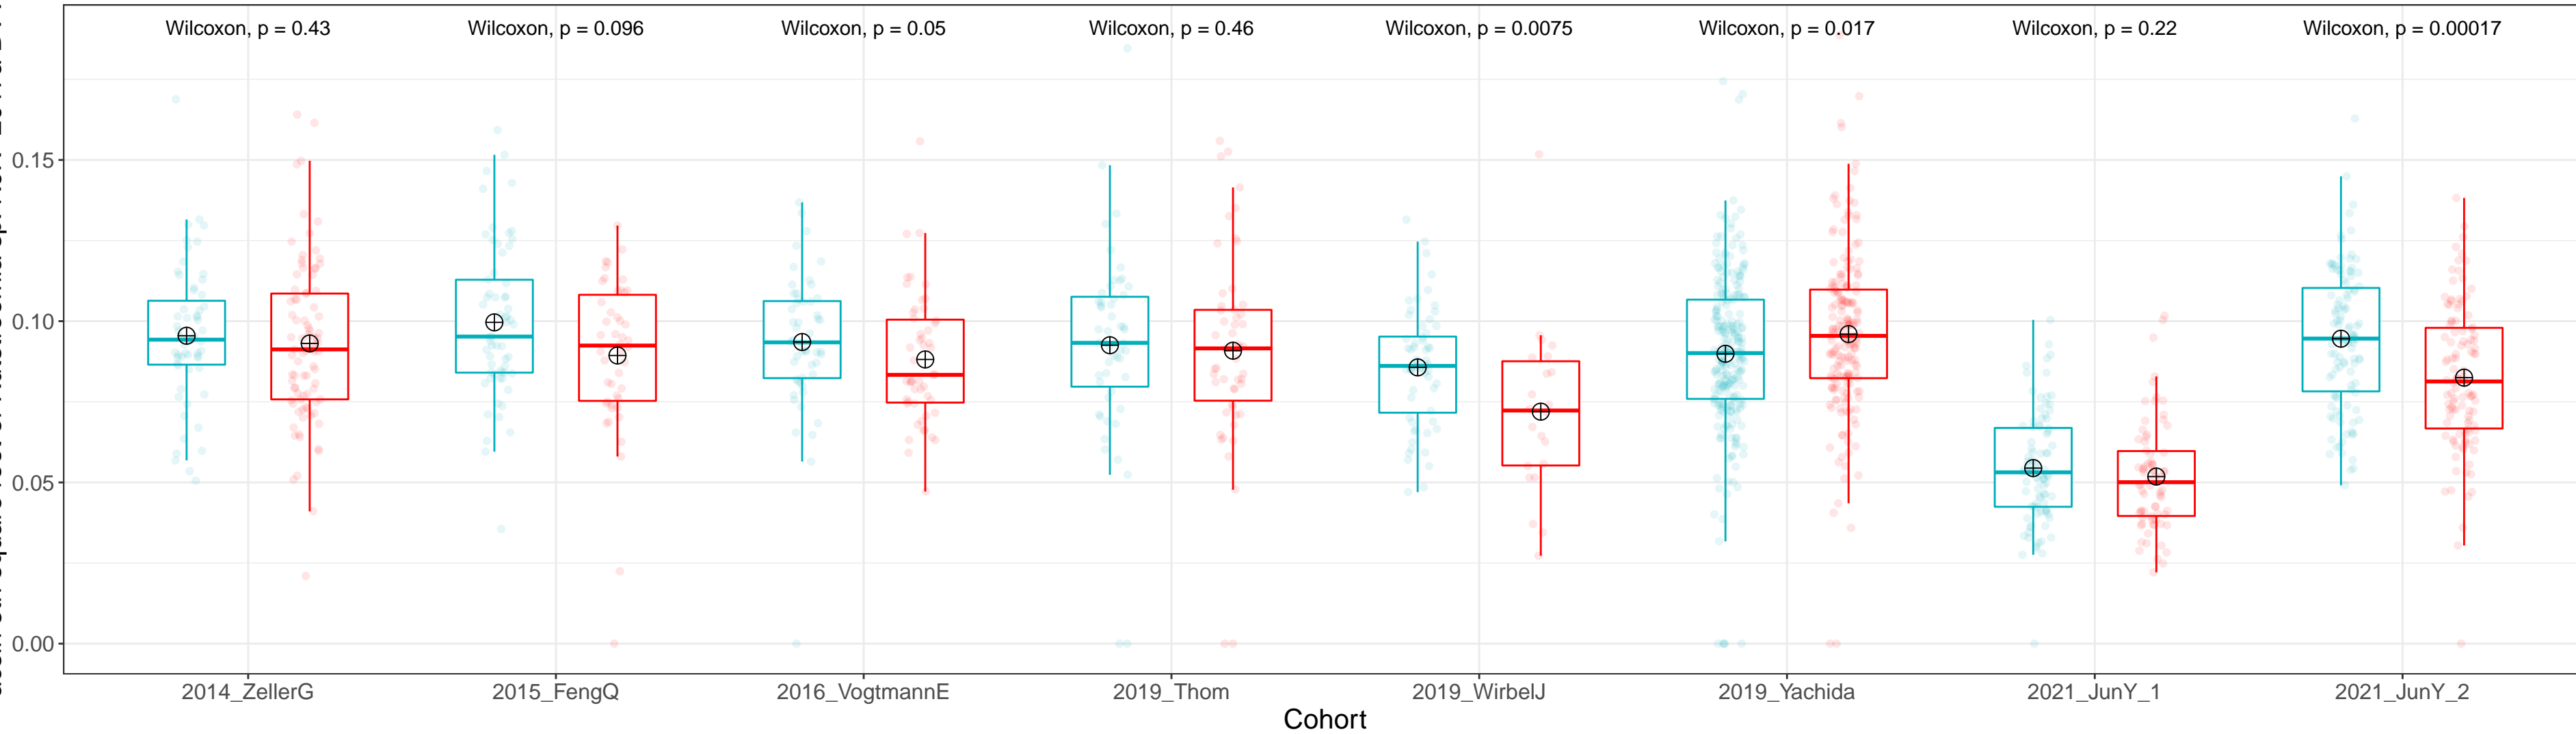

Rutstroemia sp. NJR-2017a BVV2

7 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

Stage ▢ CTRL ▢ CRC

accin 3th square root of Rutstroemia sp. NJR-2017a BVV2

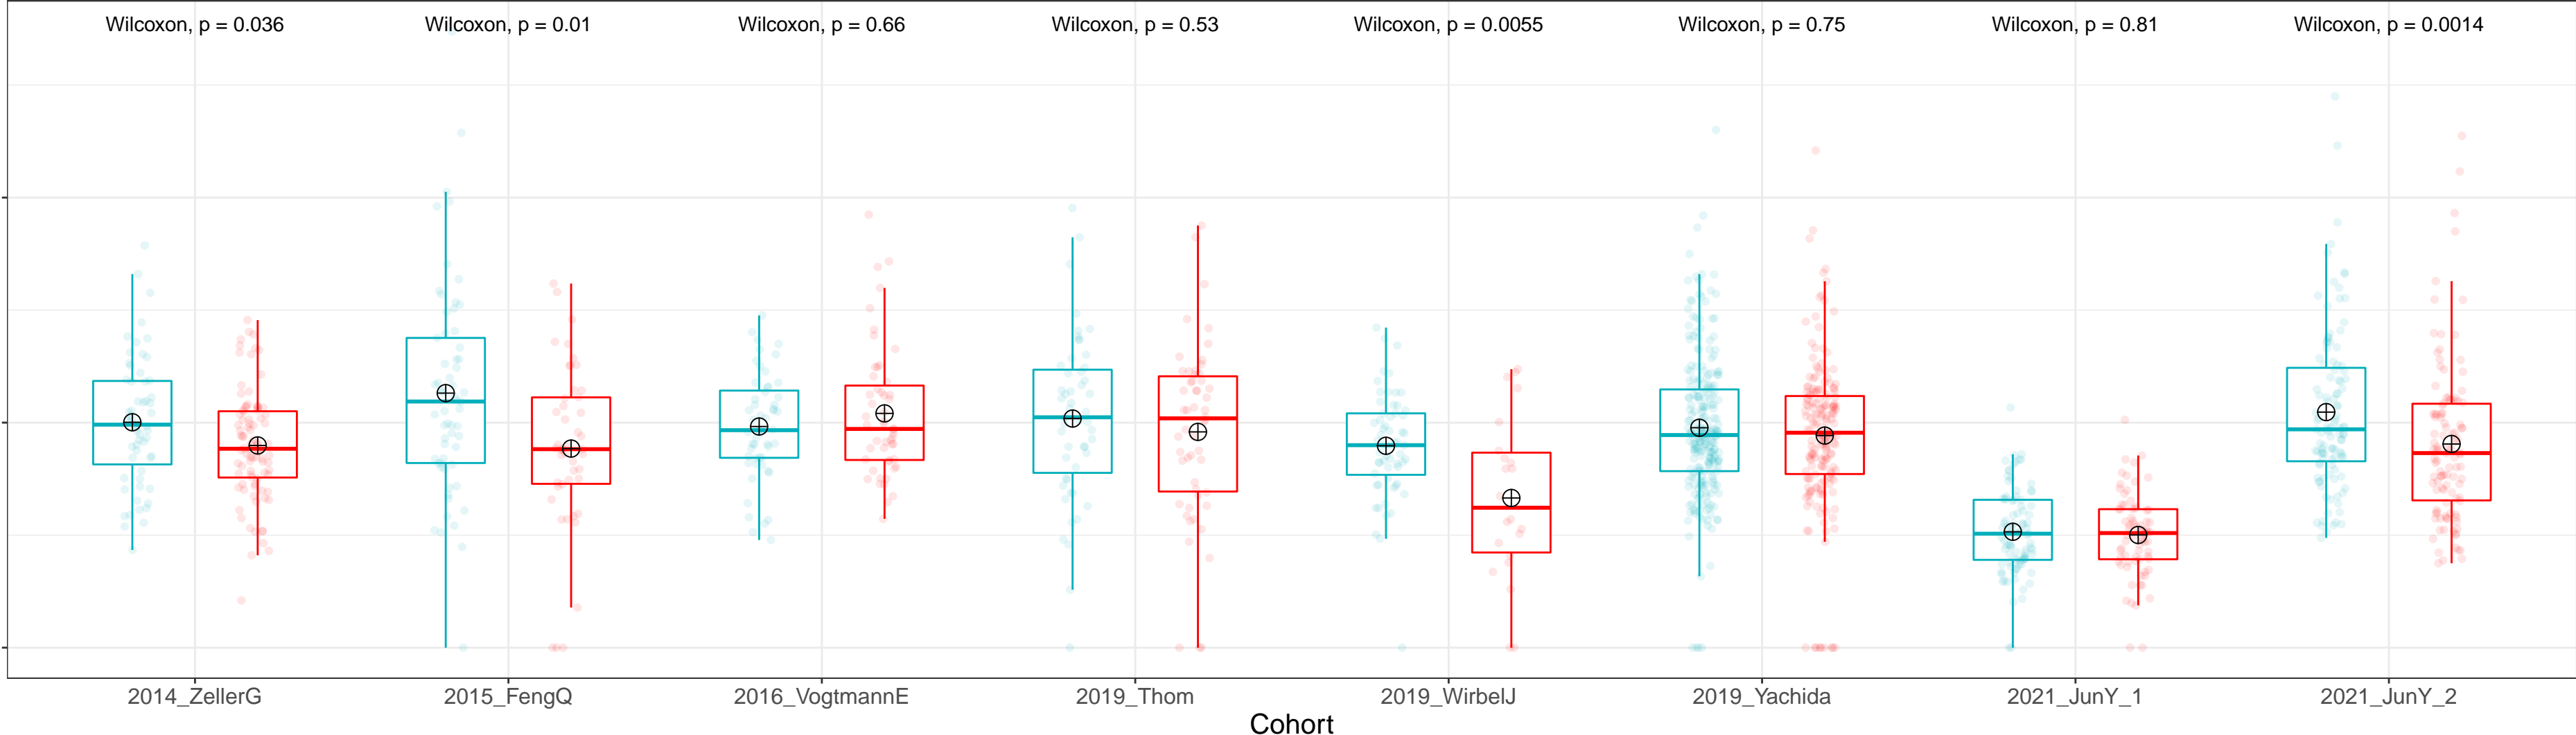

Rutstroemia sp. NJR-2017a WRK4

7 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.

Stage CTRL CRC

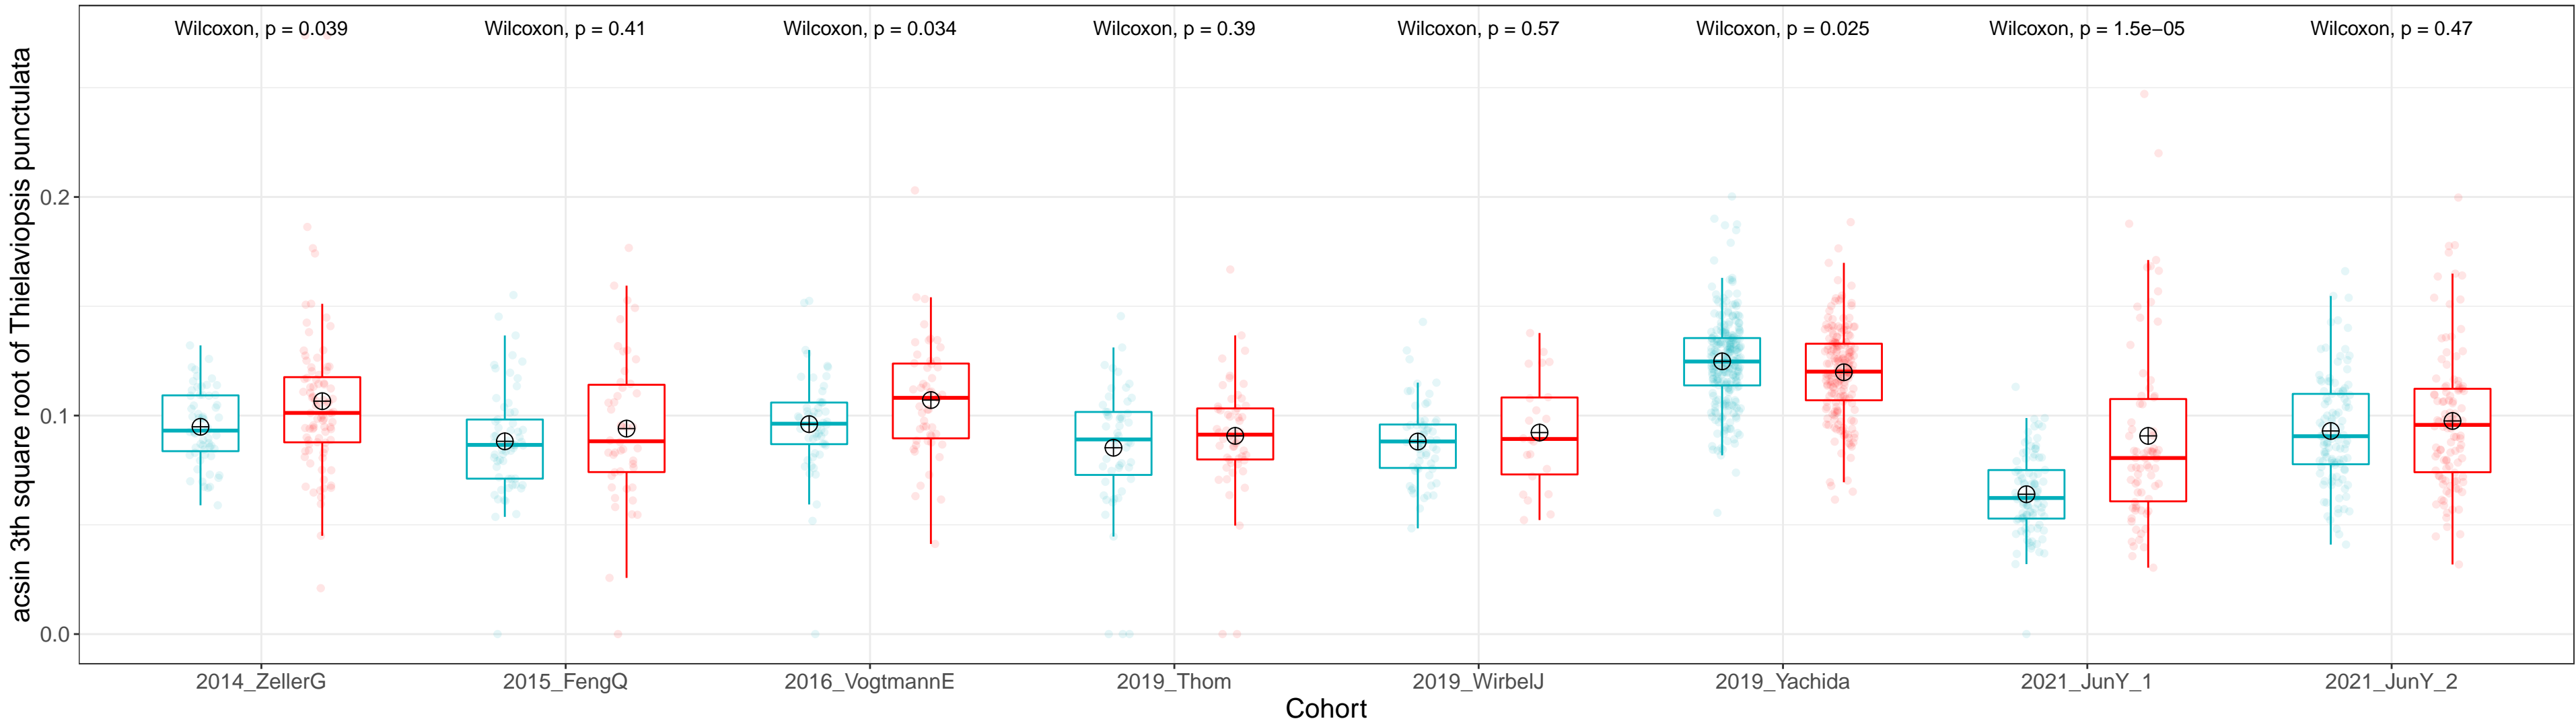

acsin 3th square root of Rutstroemia sp. NJR-2017a WRK4

Thielaviopsis punctulata

7 cohorts has same trend in enticed in CRC
4 cohorts play significant different.

Stage CTRL CRC

Colletotrichum fioriniae

7 cohorts has same trend in depleted in CRC.
4 cohorts play significant different.
